

## **A Study on Microfinance and Rural Development with the initiative of nationalized Bank specially SBI in Assam**

**Dr. Dilip Ch. Das**

Asst. Professor, Dept. of Commerce, Goreswar College, Goreswar (BTAD) Baksa, Assam

### Abstract

*Micro finance is a provision of thrift, credit and other financial services and products of very small amount to the poor in rural, semi-Urban or Urban areas for enabling them to raise their income levels and improve living standards. Again Micro finance is the provision of a broad range of financial services such as deposits, loans payment services, money transfers, insurance to poor and low income households, their micro enterprise etc. Micro finance is a participative model that can address the needs of the poor especially woman members. It envisages the empowerment of the members by promoting their savings habits and extending bank loans to them. Robinson (2001) defines microfinance as "small scale financial services primarily credit and savings provided to people who farm, fish or herd" and adds that it refers to all types of financial services provided to low income household and enterprises. Micro finance is recognized and accepted as one of the new development paradigms empowerment for alleviating poverty through social and economic empowering of the poor with special emphasis on empowering woman. In India, Micro finance is generally under stood but not clearly defined. The emerging Micro finance revolution with appropriate designed financial products and services enable the poor to expand and diversify their economic activities, increase their incomes and improve their social well being (Borrell and Cuevas, 1996 Ledger wood, 1999). Micro finance is the provision of financial services to low income clients or solidarity banking groups including consumers and self employed, who traditionally lack access to banking and related services. In broad sense it is a movement who objects is a world in which as many poor and near poor households as possible have permanent access to an appropriate range of high quality financial services, including not just credit but also savings, insurance and fund transfers, those who promote micro finance generally believe that such access will help poor people come out of poverty. On the other hand, the revolution of microfinance particularly the success stories of institutions like a Nobel laureate institution propounded by Mil. Yunus Ali Gramin Bank in Bangladesh, Banco sol in Bolivia, and Bank Rayat in Indonesia (BRI) attracted several economists to study micro finance in the latter half of 1990s. In India SEWA (Self Employed Woman's Association) Bank is the oldest micro finance organization.*

*A Study on Microfinance and Rural Development with the initiative of nationalized bank Dilip Ch. Das which was founded in 1974 in Ahmedabad, Gujarat. It was a trade union that first started organizing self-employed women.*

**Keywords:** Thrift, Credit and other financial services, loans payment services, money transfers, insurance to poor and low income households.

**Introduction:** Microfinance is the provision of a broad range of financial services such as deposits, loans, payments, money transfers and insurance to the low-income households and their microenterprises. The basic purpose of Microfinance is to provide access to financial assistance, including Credit to the poor to enable them to start/expand micro enterprises to break out of poverty. Micro Credit enables the poor people to be thrifty and helps them in availing the credit and other financial services for improving their income and living standards. The poor are encouraged to voluntarily come together to save small amounts regularly and extend micro loans among themselves. Once the group attains required maturity of handling larger resources, the bank follows.

After independence, the Government of India and Reserve Bank of India have made effort to provide credit to the poor through organized financial institutions. In the organized sector formal credit institution has been increased. But they are unable to cover the all backward area. The rural people continue to depend on informal sources of credit. Institutions have also faced difficulties in dealing effectively with a large number of small borrowers, whose credit needs are small and frequent and their ability to offer collaterals is limited. Micro-finance has become one of the most effective interventions for economic empowerment of the poor. Micro finance is expected to play a significant role in poverty alleviation and development.

### **Objective of Study:**

In view of the above this paper being prepared with the following objective –

- (i) To examine the concept of Micro finance.
- (ii) To evaluate Microfinance provided by the bank and socio economic Development of rural people.
- (iii) To Analysis the information collected from respondent.
- (iv) To find out the result of Micro financing in rural area.

With the objectives this is an attempt to examine the concept of Microfinance in the economically backward district of Assam.

**Methodology:** This study is based on both primary and secondary information. The Primary information are collected from the operating nationalized bank UCO & SBI Mukalmua Branch in Nalbari District, Assam and another a Branch of SBI at Dadara in Kamrup District.

The Secondary information for the Study will be collected from the following Sources- Book and Journal, wave side, SHGs of Nalbari District.

**Microfinance in our country:** In India, a variety of micro-finance schemes and various approaches have been practiced by both Governmental and Non-Governmental organizations. But they are unable to provide financial assistance in the long run. Ultimately the aim is to empower the poor and encourage them into development.

Variety of micro finance organizations in government as well as non-government sectors exists in India. Leading national financial institutions like, the National Bank for Agriculture and Rural Development (NABARD) the Small Industries Development Bank of India (SIDBI) and the Rashtriya Mahila Kosh (RMK) have played a significant role in making micro credit a real movement in India. Most of the organizations tend to operate within a limited geographical area. There are a few exceptions like Professional Assistance for Development Action (PRADAN), International Centre for Entrepreneurship and Career Development (ICECD), Mysore Resettlement and Development Agency (MYRADA), Self Employed Women's Association (SEWA), which have been successful in replicating their experiences in other parts of the country and act as resource organizations. Also, many organizations have been involved with SHGs is not only providing credit, but for other purposes like watershed, agriculture also.

One of the most common practices and approaches is providing credit through self-Help Groups. The approach is to make SHGs the main focal point to channelize all credit to members. Almost, all national funding organizations (NABARD, RMK) as well as other Government organization advocate forming of Self-Help Groups and providing or linking with credit.

The experiences of micro credit movement in India have shown that Self-Help Groups are widely used to promote and serve the micro credit needs of the poor for a sustainable livelihood. System, SHGs, which were organized by either NGO or GO had to be linked to the commercial or nationalized banks to get financial assistance. It is done based on the strategy to provide each of its member's opportunity to improve their personal and public life economically.

**Growth of Micro Credit Institutions:** A pilot project for purveying micro credit by linking Self-Help Groups with banks was launched by NABARD in 1991-92 with a view facilitating smoother and more meaningful banking with the poor. RBI had been advising commercial Banks to actively participate in this linkage programme. The scheme has since been extended to RRB and Co-operative Banks. There are three models of linking SHG and Banks in India.

#### With regard model-wise linkage:

- Model I.** provide all assistance directly to SHGs without any intervention or facilitation by any NGOs.
- Model II.** provide all assistance directing to SHGs with facilitation by NGOs and other formal agencies and
- Model III.** provide all assistance through NGO as facilitator and financing agency.

**Institutional Financial Sufficiency (IFS):** Institutional Financial Sufficiency is essential for a Micro Finance Organizations to obtain the large amount of funds required to reach and benefit a significant number poor and poorest household. Christen, Rhyme, Vogel & McKean, e. (1995) mentioned that IFS reflects on MFO's, "ability to operate at a level of profitability that allows sustained service delivery with minimum or no dependence on donor inputs." The most important reason for moving towards IFS is funding Reducing poverty by reaching a significant numbers of poor and poorest households require vast amounts of funds. Donors funds for supporting microfinance are limited, and probably not from governments either. Grants and soft loans have played and continue to play, major roles in financing MFO's start-ups (Gibbons and Meehan, 2000).

In rural areas, the practice of saving money in financial institutions is yet to catch up with. The study revealed that 74.39 of them did not have the habit of saving money in financial institutions, only 8.09 percent of them save their money in the banks. In the target area 8.52 percent of them saved their money in SHGs. In post office 2.57 percent of them saved their money. People had slowly started saving little money in SHGs and banks. If these efforts could be encouraged eventually the money lenders would vanish from rural areas and marginal farmers can be saved.

#### Details of Savings Institution:

Particulars	Number of Households	Percent
Banks	132	8.09
SHGs	139	8.52
Postal	42	2.57
Others	105	6.43
No Savings	1214	74.39
Total	1632	100.00

Sources: Website Micro Finance (SBI)

**Concept of Self Help Group:** A Self-Help Group (SHG) is a small, economically homogeneous and affinity group of 10 to 20 poor persons which come together to—

- \* Save small amount regularly.
- \* Mutually agree to contribute to a common fund.
- \* Meet their emergency needs.
- \* Have collective decision making.
- \* Resolve conflicts through collective leadership and mutual discussion.
- \* Provide collateral free loans on terms decided by the group at market driven rates.

**Physical and Financial Growth:** During 2006-07, the number of new SHGs credit linked with banks was 0.7 million taking the cumulative number of SHGs credit linked to banks at 2.9 million. During 2007-08 87852 SHGs have been credit linked taking the cumulative figure to 3.01 million. The phenomenal outreach of the programme has enabled an estimated 41 million poor households to gain access to micro finance from the formal

banking system registering a growth of 24.16 percent over 2005-06, today Commercial Banks with more than 32000 rural branches have the largest share (55 percent) in credit, linked SHGs follower by Regional Rural Banks (31 percent) through their 11,900 branches. Besides NABARD is working with more than 3000 NGOs and other development agencies as partners in the process.

Microfinance program is typically viewed as an economic development strategy, where disadvantage groups basically not benefited from involvement with the formal economic activities. MFO's are designed to improve access of the rural poor to financial services, make them bankable clients and promote savings mobilization among them.

The primary objective of MFO's following welfare approach is to alleviate poverty, that is increase the economic and Socio economic impact of their product and services on a significant number of poor.

**SBI and Microfinance:** SBI has adopted the Self Help Group movement in a mission mode with an objective to provide credit facility to those households not having access to credit from any formal financial institution and consequently dependent on money lenders and other informal sources.

SBI has been extending financial help to non-government organizations (NGO's) or Voluntary Agencies since 1976 and thereby it has been associated with Microfinance prior to the launch of SHG – Bank credit linkage programmed as a pilot project by NABARD in the year 1992. Since 1992, SBI has been playing a significant role in financing SHGs and a steady growth has been witnessed.

The data relating to SHG bank linkage as on March 2010 shows that SBI with the help of its vast network of branches which are stretched throughout the length and breadth of the nation, have opened 12,16,891 Saving Bank account of SHG out of which more than 10.62 lakhs SHGs have been availing credit facilities, thereby benefiting more than 138 lakh poor people. Out of those SHGs 85 percent are women SHGs.

**SBI and Financial Inclusion:** In line with the GOI initiatives, the financial inclusion efforts planned by SBI during the year 2009-10 are as follows –

1. To issue one crore IT enabled no frills accounts through alternate channels. Alternate channels help aggressively in increasing the number of customer service points (CSP's) in a very. Alternate channels leverage technology to reduce costs.
2. To open 15 lakh no frills accounts through Banks branch channel.
3. To cover 1,00,000 unbanked villages through Business correspondent and opening new branches.
4. To increase outreach through 25,000 customer service point outlets.
5. To setup additional processing capacity of Rural and Semi urban branches by setting up 300 rural credits processing centers.
6. To open 870 new branches under seen wave of branch expansion programmed.

7. To open at least 250 rural household account at each Rural and Semi urban branches every year as per GOI directives.

In the field Survey the nationalized Bank have been visited to find out the working SHGs. In Kamrup District SBI Dadara Branch has been visited and they have given the following information

- Total loan Sanctioned to 150 SHGs. The loan amount Rs 25,000 each totaling Rs.  $150 \times 25,000 = 37,50,000$  during the year 2012-13.
- Rs. 10,000 from each loan its subsidy thus ultimately SHGs is to refund Rs. 15,000.
- The SHGs working in Kamrup District are very quickly refunding the loan amount. After refund the loan they apply again for a credit linkage system.
- The Branch Manager inform that after getting the higher amount of loan from the bank Self Help Group are not refunding the loan from a numbers of year in spite of regular notice to them. This has led to increase NPA of the bank. The following chart shows the NPA of SBI Dadara Branch.

State Bank of India

**Conclusion:** Nearly three billion poor people do not have access to the basic financial services essential for them to manage their precarious lives. Microfinance is the provision of providing financial services to low income poor and extreme poor people all over the world. Microfinance program incorporate the social and economic development concepts as well as principles that underlie financial and commercial concept. This contribution has led to the development of a growing number sustainable microfinance institutes around the world. The successful experience of micro finance institutes has drawn attention to the profit potential from serving the low income market segment. Microfinance has a substantial impact on money dimensions of social and economic development. Microfinance enables borrowers to attain higher house hold incomes, increase saving rates, Smooth consumption pattern over their life time and finally be able to diversify their sources of income generation. Access to financial services also interprets into broader social benefits, including improve health, increased educational participation and greater gender equality.

## **Problems and Prospects of Rural Development in Assam**

**Dr. Dilip Ch. Das**

*Asstt. Professor, Department of Commerce, Goreswar College, Goreswar (BTAD) Baksa, Assam, India.*

**Introduction:** Assam is an underdeveloped economy. It has still excessive pressure of population on land, problems of chronic unemployment and poverty, un-utilized and under-utilized resources, low level of technology, so on and so forth, which suggest that the economy of Assam is an underdeveloped one. It is endowed with very rich natural resources which, if exploited to their full potentialities, can raise its economy to much higher level of development than what it is now. Human efforts for development through structural transformations of various sectors and factors are much more important than mere presence of untapped natural resources.

Therefore, it is very important to understand those problems which have been retarding the growth of the state and the measures to eliminate such problems. At the same time, they must also be able to discover the prospects of the development of the economy with the available resource base of the state.

Taking into consideration of all these issues, an attempt has been made through this paper to point out the main problems of the rural development of Assam leading to industrialization and agricultural, to suggest appropriate measures to overcome these problems and to throw light on the future prospects of pace development of its economy.

### **Objectives:-**

The objectives of this paper are stated below:-

- i) To analyze about the problems of industrialization and agricultural.
- ii) To know about the causes of various problems.
- iii) To point out whether the different Government schemes are helpful or not to the rural industries.
- iv) To provide remedial measures to overcome those problems of rural industries and agricultures.
- v) To highlight the present state of industrial development.
- vi) To analyze the future prospects of rural development of industries and agriculture of Assam.

**Significance:** The economy of Assam is underdeveloped one though it has abundant of Natural Resources like forest, crude oil, etc and fertile land for cultivation of various high

valued crops. The development does not originate and proceed by itself. Human efforts are much more important for its development. This paper will discuss on the rural development of industrialization and agricultural sectors of Assam and the different problems leading to it and the future prospects that Assam has for its rural development in near future.

**Methodology:** The method applied in this paper is descriptive. The data has been collected through primary as well as secondary. The primary data is collected through visiting few units of cottage industries, observation and personal interviews in the area of Sarthebari and Sualkuchi. And secondary data is collected through various books.

**Analysis:** Assam is one of the industrially backward states of India. The pace of industrial development in Assam has been satisfactory in spite of being endowed with a high potential for development of resource based and demand based industries in the state. The causes of this slow industrial growth in the state are many, among which the most important ones lack of power facilities, poor transport and communication facilities, shortage of technical personnel, dearth of entrepreneurial motivation, shyness in the flow of outside private investment and low level of central sector investment. The industrialization in Assam started more than a century ago (i.e. during the 19<sup>th</sup> century) with the establishment of tea plantation and oil industry in the upper Assam area. But unfortunately the state has failed to complete so many decades of planning and has remained lagging behind many states of the country in the sphere of industrial development.

The village and cottage industries are the integral parts of the rural economy of Assam. These industries absorb quite a lot of rural people providing them with employment and income and thereby raise their standard of living, which help to bring about technical changes and balanced and integrated rural economy. These industries had to face a stiff competition from the machine made foreign goods. Many of the village industries had to take path of extinction. Therefore, the first task of the first five year plan of Assam was to provide a congenial atmosphere with good infrastructure for the development of village and cottage industries. The cottage industries have great importance in an agrarian economy like Assam. Rural agricultural families of the state are getting subsidiary occupation from these village industries. As these industries require minimum capital and ordinary tools and implements, thus rural families can run these industries. The cottage industries like Bell-Metal industry at Sarthebari, Silk Weaving industries at Sualkuchi etc. are in the way of rural development. There are many problems arises of cottage and village industries of Assam which is to be analyse in this paper with its causes.

❖ **Problems of rural industries i.e. village and cottage industries and its causes :-**

Although the heritage of rural industries in Assam is very rich but these industries are handicapped with innumerable difficulties.

- Due to ignorance and illiteracy these industries are using outdated tools and old methods of production and thus could not keep pace with other sectors of the

economy. They fail to adopt new techniques and thus produce old designed traditional goods.

- Due to dearth of capital, rural artisans and craftsmen are very poor and thus they depend on village money lenders to meet their financial needs. Necessary funds are not made available to the rural artisans and craftsmen from the commercial banks and other financial institutions. Thus, these industries cannot modernize their production process.
- Scarcity of raw materials faced by village and cottage industries in the state. The supplies of raw materials at reasonable price are not regular to these industries which create a problem for smooth functioning and also retard the growth and expansion of these rural industries.
- There are no proper training facilities to the artisans. Thus the artisans are still following outdated methods for production.
- Due to lack of proper marketing facility these industries sometimes go for distress sell of their products to the private dealers at a poor price.

Lastly, the rural industries like village and cottage industries are facing increasing competition from the large scale organized industries. Due to high cost structure, poor quality and design, the village industries cannot stand in the competition with the organized industries.

❖ **Government's effort towards the Rural Industries for its development:** The State Government of Assam has introduced different measures to sort out difficulties of rural industries. The government has introduced a long term scheme advancing loans at cheaper rates to these industries. Besides, Assam Financial Corporation, Co-operative Apex Bank and the Nationalized Commercial Banks are also offering long-term credit to these village and cottage industries. Further, the State Government has taken steps to offer basic infrastructural facilities for the smooth growth of it and also set up emporiums and Khadi Bhandaars in various towns to provide a good market for the product produced by these industries. Thus the future of this industry sector depends upon the successful implementation of these measures.

❖ **Remedial measures to solve the problems of village and cottage industries of Assam :**

As this paper has analyzed some of the problems cited above, therefore following remedial measures are provided:-

- ✓ Efforts should be made for modernization and expansion of these rural industries. Workers should be acquainted with modern scientific techniques and methods of production.
- ✓ There should be availability of capital. The commercial banks and financial institutions should come forward with various scheme of short and long term credit at cheaper rates.

- ✓ Proper agencies should be developed for supplying raw materials regularly to the rural industries at convenient time and rates.
- ✓ There should be adequate training to the workers working in the village and cottage industries.
- ✓ Proper marketing arrangements should be developed in different parts of the state for the smooth sale of the product of these industries.
- ✓ More "common facility service centre" should be developed in the state, so that the rural industries get all the necessary common service in time to face the increasing competition.

❖ **Present status of Industrial Development in Assam and its future prospects :** The present state of Industrial development in Assam is not up to the mark. In spite of having rich potential for the development of different types of resources based industries, the state could not achieve much diversification in its industrial base, leading to restriction of its industrial activities mostly in village and cottage industries in rural areas. Moreover, the investment environment in the state is considered to be insecure considering the growing problem of insurgency, prevailing in the entire region. The state is facing the problem of huge capital flight and exodus of business firms.

In spite of various constraints the prospect of the development of rural industries in Assam is brightened under the ongoing process of economic reforms like industrial policy, trade policy etc. with the sole objective to bring a new element of dynamism. Assam being an industrially backward state, having a huge potential for rural development, can be able to make much headway in the path of industrialization under the current process of economic reforms. It can be finally observed that the future prospects of industries, especially rural industries, is quite bright provided an investment friendly climate is create in the state.

❖ **Agricultural Development:** For an underdeveloped state like Assam with its low level of income, it is a necessary condition for the development of its economy that there is an appreciable increase in the domestic agricultural output. During the process of rural development, it is essential to maintain a continuous growth in the supplies of agricultural commodities in a large scale to support the growing demand for food-grains and raw materials from the large and increasing population, and also to meet the relatively high income elasticity of demand for agricultural products. Assam have to use the limited incomes for purchasing machines and other advanced tools for agricultural development, and cannot spare for buying or importing foodstuffs from other regions. Therefore, it is important to raise the agricultural production and productivity to promote and sustain rural development of the state.

Adoption of modern technology or method is known as modernization of agriculture or transfer of technology in agriculture, which, Assam is progressing at a slow pace. There are certain major problems and its causes responsible for the slow pace of agriculture in Assam. These obstacles are mentioned below:

- Absence of sufficient assured and controlled water supply due to lack of adequate irrigation facility.
- Small size of agricultural holdings.
- Lack of high yielding variety of seeds and its limited use in agriculture.
- Scanty use of fertilizer.
- Lack of adequate finance.
- Natural factors like floods, attack by pest or insects etc. are also responsible.
- Lack of adequate agriculture research.
- Lack of motivation of farmers.

From the above cite problems of agriculture, there are some remedial measures for sustaining agricultural production in Assam.

- The farmers in Assam should try to modernize the agricultural sector by adopting modern implements such as – high yielding variety of seeds, applying adequate quantity of fertilizers etc., in order to keep pace in respect of increasing agricultural production.
- Adequate organizational steps must be taken for the development of the agricultural sector of the state.
- The scope of agricultural trade must be widened. Assam being an agricultural state can avail the benefit arising out of economic liberalization through diversification of its agricultural exports.
- Lastly, Development and expansion of agricultural industries can lead to a boost in rural development of Assam.

Thus, these papers has analyzed about the problems and prospects of rural development leading to industrialization and agricultural. Therefore, it is expected that a good number of rural industrial and agricultural projects may be developed in Assam in near future provided suitable investment environment in the state. This requires an active support from both the Central and State Government and also the active participation of the local people of rural areas of the state.

**Conclusion:** It is very important to understand those problems which have been retarding the rural growth of the state and the measures to eliminate such problems. At the same time, it must be able to discover the prospects of the development of the economy with the available resource base of the state. Through analyzing the problems and prospects of rural development, leading to industrialization and agricultural, it has been come to conclude that for the development of rural industries such as village and cottage industries and the agricultural sectors of Assam, there should be proper utilization of Natural Resources, the marketing arrangement should be proper, better infrastructure, export oriented, good irrigation facilities for agriculture, availability of fertilizers and Government support. The Government will have to play a much greater and active role in Assam for promoting industrialization and agricultural process.

opposition and dissatisfaction of British Imperialists only in India but also in other parts of world. Annexation of North East India by the British Indian Empire under the Treaty of Simla (1891) after the termination of Assam by the Cooch Behar Treaty thus was directed by the British Empire on other motives. The Gurkha Kingdom had fought very bravely in the Sino-English War (1891) like Akbar Shah, Naga Shah, Adi Shah etc... The British Raj could not effectively suppress all different revolts in the masses. During the Second World War, they fought against Japan major battles at Manipur. In this paper an attempt will be made to discuss the role of Gurkha Kingdom in the expansion and consolidation of British Empire in the North East India.

in the military history of world, as well as in Indian and English military history. The Regiment had fought several battles in the different wars fought around the world. They also fought several battles in the North East of India under the Colonial Government. The Regiments took part in Assam, Arunachal, Meghalaya, Manipur, and Nagaland. The colonial government used British Regiments to protect the colonies. There is no nation. That regiment was used to suppress the tribes in the hills. It was used to subdue and to control the tribes. The previous leadership took their parts in the different war like such as Arunachal rebellion, Nagaland rebellion, Manipur Separation etc., along with several battles during Second World War.

the history of the nation's regiments in the South had held until before  
midnight last night. The departure of Holtzberg's householders of Columbia  
regiment left nothing but bare shells. Shelling service as regiments of the 6th  
Columbia Regiment left more than 100 pieces. In 1862 a company was  
formed in search of suitable place for permanent station for Lampung  
people before the 1862 nation of Sumatra became a "Bantam". This com-  
pany after thorough research and consideration selected Shelling. The  
process of transfer of military was however delayed such result of Anti-  
Borneo war (1864-65), the final approach happened in August 1865, the  
4th moved into their new quarter in the Government in 1867, later it  
was called as Rd. Cikutra 24th (Kota 20). The establishment of regimental  
headquarters of Columbia regiment at Shelling had to the third its movement.

*Methodology*

The research will be based on historical research, methodology and the primary and secondary sources will be used after proper analysis.

Mathematics

residents, however, one may guess, in North Tibet, on the other hand the most remarkable cities of North East India were Akher, Shigatze and Lhasa. These three cities lie in hills and well supplied with streams. The water, though, like water, was generally of moderate quality, and probably not in possession of fixtures; but they were very quickly adapted to using spars, pointed arrows and a wide variety of tools, both stone and

which forced by the British move on the North East frontier at the 1602 Battle of Panipat on the Nath River frontier (Chap 47). At the Gurkhas were familiar with the techniques of hill warfare, especially they are masters of jungle warfare. As the government used the 3rd Regiment and various other units principally in the eastern provinces of India against the Sikhs, Lushai, Ahoms and other tribesmen, all of whom contained brave British officers (Chap 29). The Naga expedition of 1791, Manipur War of 1814 and Arcoy Hill Expedition of 1791, were entirely dependent on the basis of poems written about these wars by the Churkha spiders who participated in these wars along with other sources.

The 1791 Churkha War, who gave the title in the most trouble, were probably the Lushais. These people were originally opposed to the independence of the states after 1857 by the arrival of British and the extensive development of tea plantations (Chap 42). In the early 1770s the Lushais had carried out a series of raids against neighbouring tea gardens, particularly in the Cachar district, where they harassed many local coolies and some Europeans and also cut up one or two small frontier posts (Chap 39). This failure led to the Lushai expedition. The Churkha Government invited a substantial force into several columns to penetrate into the Lushai territory and named the expedition as 'cock and destroy' mission. Two Churkha battalions were allocated to the expedition, the 42nd Regiment accompanied by one column and the 2nd Gurkha regiment formed part of the column that advanced into the Southern portion of Lushai area under the command of General Brewster (Chap 42-43). The expedition ended with the capture of Lal Gouron's village. The 42nd Regiment and the 2nd Gurkha, as a part of the Lushai Lusoh-Henry Force, had only minor campaign claims credits with the Indian Mysore war because of the fighting lost, in general Brewster's words because 'the history of the expedition has been sheer hard work'. In the same caption, Major Brewster sent Vice-Admiral Coote for his gallantry and bravery in the war (Chap 43).

In 1790, the British movement Ralph of Marpur was assisted by his younger brother, who refused to accede to British demands that he step down. A. W. Quinton, the British Chief Commissioner of Assam, decided to take punitive action and in March 1801 he set off with a force of 4500 Gurkha Regiment soldiers except for the local political officer. E-

General. The force led by Quinton reached the airport, Imphal, without any hindrance but the regiments were armed and killed in the battle. Meanwhile, over 200 Churkha were left without any senior command so they headed back to Assam. Reacted in the militancy by several thousand Manipuris. They fought on until their ammunition was exhausted. By now the house was burnt, and in the fire light they fought with Jashier and happened until they were over powered by sheer numbers. Akbar (He arrived as prisoners in the hand of Manipuri rebels soon, the three columns were sent to Manipur to face revenge of the Manipurian. This force included 4th Bengal and 1st Battalion of the Churkha, 17th Sikhs and 17th Dragoon. These fighting concluded, when Akbar was captured and brought to trial and flogged, and justice thereafter applied (Chap 40-41).

One of the important sources of this event is a poem named Manipurko roun. This poem was written by Thakuram Vilay of 41st Churkha Battalion, who was one of the participants in the war. The events described in the poem and the year mentioned in the poem is also supported by other books like History of Manipur by Dymond Roy Akbar the history of the poem Manipur and Manipur War in his book. Seven in Lalnem Xavva Sankar, 'The self between Raja of Manipur and the East India Company, Faizullah Aliya (who was Lalnem Raja) Churkha Platoon fought fiercely, he wrote the poem "Manipurko Lakhi 5arm" in around 1803 due to long war he says, it's suffer and happiness of the expedition' (Chap 40-41, forgetting the year of campaign Akbar Army vanquished).

#### Sekhukhuna Khayo Matupi (ji)

Manipur ka tapasang Samaj gari matu

Angroj matku akhunayi sal ho

Moche matuniko matu yarhi tuo (Saghu 41-42)

Here Arcoy clearly mentioned that on the 27th date of March 1801, the 42nd Churkha Platoon in order to march towards Manipur to reduce the power of Manipuri king. The other incident and the source of war were mentioned in the poem.

Arcoy Hills Expedition was another major military expedition, Churkha Regiment took part, in the month of April 1803 the Alloys of Manipur seized three Meri hills and carried them off. On the 16th Ap-

comes the Pahari. Then suddenly the Rajput is partially absent, when we see him again, he has returned to the camp to return to his camp. He has no longer any more body, they said, but many a man is machine and has turned back in the direction of all into his home. His brother is still there, he is still here, he is still there, who will kill who? (24) They asked, they asked, on the point were submitted, and an instant, the general like Dinkar Lalwade and those others said, There are no such soldiers as us. (25) They are the ones who are more than all. Major Holm, the other of the Gurkha rifles and their men, who are the people whose every word, every move, every movement of Ceylon, have been killed, are the men and women of the expedition were names in Mr. Holm's (26) book. All the expedition, Sardar Chakkar Lalwade, Dinkar Lalwade (27) and Gurkha Major were appointed as drivers. After returning all the work of a horse, was the place for the formation.

The poem, *Chittagong 1913*, written by the poet, describes the events of the 1913 expedition to Chittagong Hill. This includes the events of Teesta Expedition (in 1907), Rangpur (12,700 km) about Naga expedition and rechristened it as poetical title *Rangpur (Naga) Saw*.<sup>28</sup> In this poem, Ranga (not described) has seen at the high level of 1913 in poetic way. As a case of the expedition organized by the British between two groups of Nagas, Lushai Chakwadu and Jaintia, equal to the conflict, vision of Chittagong call off the need of human catastrophe and link it with them. Thus, other Naga of Chittagong request their chieftain to save them, who ultimately request the British to stabilize in the hill. On the other hand, Assistant Commissioner in Chittagong, Sir George Poole, Nag's Hill reported to the Governor General of India, Amanullah. On 26th January 1913, a Nag's body with Chittagong Hill had the Chittagong road came down to the Hill in large numbers. He had the Chittagong village to fall the British to Sam quickly and die with the hands. Later they fought the British in the town and taking their due retribution to their village. Present and future of Nagaland were written (1913). The ultimate end to the Rangpur Expedition (1913). Here, in this poem highlight the warning and the lessons. The poem describes the war between Akbar and Akash killing

more of the war in the following text.

Durck, British, Chittagong to Bodakdev Call

Japan 1962 Nagasaki atom bomb

(also called Karabutera (カラブテラ; Jack)

Cave Chittagong leather factory (Chittagong 64)

Here he clearly mentions that the Nazis and Soviet, how and where  
and guns as weapons to assist the British army. Rumor compare the skin  
and flesh with the War of Kurukshetra mentioned in the Mahabharata. And  
the segment work conducted for four hours. In the following places he  
tried to explain the nature of war and what kinds of difficulties they  
suffered during the expedition due to various tools and jungles. The  
poem also described how the Nazis were defeated and the villages of  
rival Nagas were destroyed by the Gurkhas.

The poem also describes the suffering of Gurkha Soldiers. Gable  
Kala described that there was no food to eat and water to drink. The  
expedition was so severe that even they had to sleep on land with sand.  
After having food, the stanza given below describes the severe cold  
not suffered by the soldiers.

Verses from that poety than rapakam

Kogor, Kalyana harkha pulka matali kham  
Hai dhane jana chakna dhakna hain

Khyakha na palayalo haluwana nichu (Kapoor 83)

Gable Kala has also described the condition of Nagas women and  
children and the impact of Nagas expedition upon them. Gable mentioned  
that those who acquired death in the war have died but those who alive  
affected him. The poet especially mentioned about the tragic condition  
of Nagas women and children. (Sarkar 63).

During both First and Second World War, The Gurkha regiment has  
played an active role and distinguished in different conflicts in different coun-  
tries to protect the British interest. During the Second World War, Gurkha  
battalions were fought in the North East of India, in which the Gurkha regi-  
ments played a prominent role. The war started with the German invasion of  
Poland on September 1, 1939 and concluded on 14th of August 1945  
with the unconditional surrender of Japan. (Lipson 1995:5) At that time  
the nations of the world divided in two opposing war camps the USA,  
Britain, France, the USSR and China, called the Axis on the one side

and the Non-Comformist, the Soviet Navy and Russia, a group who were  
engaged on the other side. As the fact, economy of health was the greatest  
for British industries, so Japan tried to weaken the health of Britain as  
India, Japan attacked India (history of Britain) from Burma and North  
eastern region of India. The Chinese government invaded the Chinese  
Regiment along with other regiments to fight against the Japanese forces  
Gurkhas fought so bravely that they able to win several battle honours  
fighting against Japanese forces. (Maitum 91-92) During the period of  
war nearly 200000 Gurkhas were recruited and over 1.1 lakh Gurkhas  
soldiers who participated in the war there were more than 30000 cas-  
ualties, including 7544 tame (Maitum 34). Gurkha soldiers like Gage  
Charles, Sami Bahadur Thapa, Agar Singh, Rakha Singh, etc were  
awarded Victoria Cross by fighting in the jungles of North East India.

Harihar Gage Charles won the Victoria Cross in the Battle of Bassein  
Hill, which took place on 27th May, 1943. Gage was the commander of  
the platoon of D company of 2/5th Gurkha rifle. The approach for his  
platoon was narrow along a knife-edge with extremely precipitous hills  
either end and had a cut through a thick jungle. As he said, since the lega-  
men put in a fierce counter attack by an attempt to drove them back. Gage  
Charles's platoon suddenly came under heavy machinegun and rocket  
fire from the enemy. Harihar Gage Charles rallied his men forward with  
firm determination facing volleys of shelling. As he dashed ahead lead-  
ing his men he was severely wounded in the arm, chest and leg but  
without paying heed to his serious wounds he pressed forward and on  
reaching the enemy trench, seized a hand-to-hand combat battle with  
khukuri. Covered fully with the blood from his wounded wounds and yet  
showed blood curdling battle cry of 'Ayo Gurkha' Gage Charles too  
would after assault defeating bravely destroy of the enemy. Only after  
the capture and consolidation of the Bassein Hill, he walked down and  
agreed to be taken to the regiment hospital. For this month's leadership  
indomitable courage and high sense of self-sacrifice Gage Charles was  
decorated with the Victoria Cross. (Maitum 91)  
Rishman Chand Lala was another Gurkha soldier who able to kill  
the highest military award Victoria Cross. He was awarded Victoria Cross  
for the bravery he has shown in the battle of Hongkong. India,

## The Role of Micro Finance for Rural Development in the North Eastern Region

**Dr. Dilip Ch. Das**

Asst. Professor, Dept. of Commerce, Goreswar College, Goreswar (BTAD) Baksa, Assam

### Abstract

In the last one or two decades, microfinance has received increasing attention of policymakers, researchers and financial service providers across the globe. The simple reason for this is the existence of millions of people in the world whose living standards are poor and are unable to participate and reap benefits in the growing story of their respective countries. This has led to the conclusion that the functioning of big financial enterprises is limited in its outreach and is concentrated merely to cities and towns. Microfinance has been considered a powerful instrument for achieving 'financial inclusion' and alleviation of poverty, enabling the rural poor to increase their income opportunities and reduce economic vulnerability. Microfinance facilitates financial service delivery mechanisms that meet the needs of poor, at a lower cost than most accessible. Enormous hopes continue to be held out for microfinance as an instrument of poverty reduction. In India the growth of microfinance in the recent past has been tremendous both in number and quantum of resources mobilized. But the fact remain that the North Eastern Region (NER) of the country is still progressing slowly as compared to the rest of the country. The movement of microfinance in catering financial services started late in the NER and still remain confined to Self Help Groups (SHGs). In fact, the limited diversification of microfinance is the case throughout the country and more prominent in NER.

**Keywords:** Microfinance, policymakers, researchers and financial service, banking institutions.

**Introduction:** The failure of the banking institutions in delivering credit to the rural poor, has resulted in the emergence of a new, innovating and viable institutions structure. This structure is known as a micro finance, success to reach the address all type of financial needs of the poor, who hit her to be not able to access credit from banking institutions due to possession of collateral and high cost of transaction. The model of micro finance is supposed to overcome these problems while at the same time improving recovery loans, a problem that has plagued the rural banking institution and affected their profitability. (Micro finance programme in North East India- Posted by editor on Wednesday, March 9, 2011 2:54 pm/1 comment)

The emerging Micro finance revolution with appropriate designed financial products and services enable the poor to expand and diversify their economic activities, increase their incomes and improve their social well-being (Bonnet and cuvees, 1996 ledger wood, 1999) Micro finance is the provision of financial services to low income clients or solidarity banking groups including consumers and self-employed, who traditionally lack access to banking and related services.

In broad sense it is a movement who objects is a world in which as many poor and near poor households as possible have permanent access to an appropriate range of high quality financial services, including not just credit but also savings, insurance and fund transfers, those who promote micro finance generally believe that such access will help poor people come out of poverty. On the other hand, the revolution of microfinance particularly the success stories of institutions like a Nobel laureate institution propounded by Md. Unus Ali Gramin Bank in Bangladesh, Banco sol in Bolivia, and Bank Rayat in Indonesia (BRI) attracted several economists to study micro finance in the latter half of 1990s. In India SEWA (Self Employed Woman's Association) Bank is the oldest micro finance organization, which was founded in 1974 in Ahmedabad, Gujarat. It was a trade union that first started organizing self-employed woman.

Micro finance is a participative model that can address the needs of the poor especially woman members. It envisages the empowerment of the members by promoting their savings habits and extending bank loans to them Robinson (2001) defines microfinance as "small scale financial services primarily credit and savings provided to people who farm, fish or herd" and adds that it "refer to all types of financial services provided to low income household and enterprises. Micro finance is recognized and accepted as one of the new development paradigms empowerment for alleviating poverty through social and economic empowering of the poor with special emphasis on empowering woman. In India, Micro finance is generally understood but not clearly defined.

**Methodology:** This paper is prepared on the basis of secondary sources of data like book, papers, articles and website etc.

**Objectives:** The main objectives of the study are:

- a. To study the evaluation of micro finance and its meaning.
- b. To highlight the development of micro finance in the NER.
- c. To study the micro finance Approach (model) which are applicable in India as well as North Eastern Region(NER).
- d. To highlight the various institutions like NABARD, SIDBI, NEDFi etc. which are impact in the SHG-BLI.
- e. To focus the needs of micro finance programme to the rural, urban and semi urban poor people.
- f. To study the drawback of micro finance programme application in the region.

**Micro-finance Delivery Mechanism in the NER:** Micro finance is basically delivered in three models. In the first instance different public and private sector banks take initiatives to form the SHG between 10 to 20 members in particularly poor women. When once the SHG is formed each member has to deposit small amount as per their groups decisions daily, weekly or monthly basis. After some month the corpus can be used for going lending among the group members. The group members have to meet bank official on regular periodic intervals and introduced their proceeding, internal books and accounts in time. The bank provides credit on the basis of accumulated savings, member meetings and internal lending's. The SHG bank linkage programme involves the SHG finance directly by public and private sector commercial banks. One of the remarkable characteristics of the SHG bank linkage programme has been very on time recovery. As on June 2005, the on time recovery under SHG bank linkage programme was 90% in commercial banks, 87% in regional rural banks 86% in the co-operative banks.

Secondly MFIs, SPHIS, federation of SHG or government organization such as (NABARD) National Agricultural Bank for Rural Development (SIDBI), Small Industrial Development Bank of India, (NEDFi) North Eastern Financial Development Institution, etc. take initiative to the form of SHGs. N.G.O., SPHIS, MFIs or federation of SHGs have provided training to the SHG. They are also implemented bank linkage programme.

Thirdly under the SHG bank linkage programme the NGOs or MFIs helps in forming the SHGs, provide all necessary capacity building training and act as a financial intermediary. Banks surprise wholesale credit or subsidized credit to these N.G.O.s and MFIs at cheaper rates compared to the rates which the banks lends directly to the SHGs.

**Micro finance programme in North East India:** India has emerged as the largest micro finance programme in the world. SHG-BLP is the important micro finance programme in the country. Under the bank linkage programme a cumulative amount of rupees 113.98 billion has been disbursed by bank to as many as 2238565 SHGs as of March 2006. Andhra Pradesh have had a disproportionately large share of the total number of SHGs that have received credit disbursed since the emergence of SHG-BLP in the country. However, the biasness of the said programme towards the southern states has lessened in recent years.

In the year of 2001-02 special focus was given to the North Eastern Region in formation of SHGs under SHG-BLP due to reduce the regional imbalance. To implement the SHG-BLP in the North Eastern Region as well as Orissa in order to reduced regional imbalance the other parts of the country with large number of small non-government organization partners and micro finance agencies for enhancing the coverage of the programme.

NABARD has been instrumental in facilitating various activities under micro finance in the North East Region. In the initial years, the SHG-BLP did not much head way in the North Eastern states. In this NER the programme started slowly. The cumulative number of SHGs credit linkage was only 93 in number in this whole area of this region which was less than half a percent in the country under this programme till the end of March, 1999.

NABARD has sanctioned 39.15 lakh to the government of Arunachal Pradesh for implementing the project, "Micro finance vision 2011". On the other hand the rural development bank has assisted 33.66 Lakh to the "Essomi Foundation Trust" for setting up resource centre at Itanagar. In the year of 2001 Assam and Meghalaya had taken for majority share in the credit links SHGs programme which was at about 58 and 34 percent respectively with in the North Eastern Region. During this period it has been seen that the states of Manipur, Sikkim and Tripura low share in the total cumulative number of SHG credit linked such as 7 percent, 1 percent and 1 percent respectively. But there did not have any SHGs credit linked programme by 2001 in the states of Arunachal Pradesh, Nagaland and Mizoram. In the states of Assam and Meghalaya are more than 90 percent SHGs credit linked in the NER until 2001.

In the states of Tripura implemented "state support project on SHG" that aims to promote livelihood activities, credit link 11,500 existing SHG and another 35,000 new credit link SHG. The "State support project on SHG" formed by the state government of Tripura in the year 2008 and it supported by the NABARD. The aims of the said project to implement 11,500 credit linked for existing SHG, forming and credit linking 35,000 news SHG which want to promoting livelihood activities among its 3 lakh members up to March 31, 2012. The technical and capacity building support provided with the help of NABARD, besides designing the system and procedures for smooth execution of the project. SIDBI, NEIDFi, RRB, co-operative bank and other private and public banks are also playing pivotal role for implementing micro finance in the NER besides NABARD. Following table are the highlight of the entire achievement in the NER during the last three years.

**Table: Saving Mobilization through microfinance 31 March 2009.**

States	No. of SHGs	Total Saving Amount
Assam	1810.0	63.0
Meghalaya	96.3	3.3
Nagaland	60.6	1.6
Tripura	228.1	28.6
Arunachal Pradesh	51.5	0.9
Mizoram	42.3	1.8
Manipur	94.7	1.9
Sikkim	17.5	1.0
NER	2400.9	102.1
Northern Region	3110.0	227.0
Eastern Region	12336.4	1596.9
Central Region	7129.2	386.8
Western Region	7962.6	664.3
Southern Region	28272.4	2568.5
All India	61211.5	5545.6

Source: Compiled from NABARD annual Report.

The above table reflected the state wise progress of micro finance in NER in terms of number of SHG and savings mobilization. Then the area wise data is also provided in the table to understand relative growth of NER with respect to other parts of India. The Assam is leaving 75% SHG alongwith 62% savings mobilized which the highest is showed by the state of Tripura with 9% SHGs and 27% savings mobilization among the North Eastern states lagging far behind. If we compare NER with respect to other parts of India, then we have seen that NER comprises only 4% SHGs and 1.8% savings mobilization. On the contrary, the southern states having highest number of SHGs and savings mobilization with 46.2% and 46.3% respectively. The above table have highlighted that the performance of micro finance is worst in the NER than the southern states. Another important point have been seen from this table that the most nearly region of NER i.e. the eastern region is having 20% SHGs and 29% savings mobilization with respect to figures of 4% and 1.8% respectively. From the above analysis it can be said that the microfinance environment is not sufficient than other parts of the country although there is tremendous scope and opportunity in the NER for the upliftment of micro finance scheme.

**Problems of microfinance scheme in the North Eastern Region:** According to the "Task Force on Supportive and Regulatory Frame work for Micro Finance" The Task Force on supportive and Regulatory Frame work for micro finance defines microlinace as "provision of thrift credit and other financial services and products of very small amounts to the poor in rural, semi urban or urban areas enabling them to raise their income levels and improve living standards.

Although the above definition have shows the increase income levels as well as improve living standards for the poor in rural, semi urban or urban areas, but this programme have not successfully implemented all over the state in the country. The micro finance programme has successfully implemented in the southern states on the contrary failed to achieve its goal to benefit poorer states such as North Eastern Region. Micro finance movement started lately in the NER due to some unavoidable circumstances. The implementation of MF programme has been facing a lot of problems and constraints in the NER. Some of them are focused in the following manner—

1. Micro finance is a new concept in the economic field in the NER for economic upliftment of the society. So there is not sufficient professional expert to introduce this programme to the poor of rural, semi urban and urban to smoothly run the micro finance institutions operation successfully and profitably.
2. Due to lack of efficient management as well as management information system and suitable implementation of high technological information tool of micro finance programme has not properly operated and maintenance in the North Eastern Region
3. Socio Economic problem such as insurgency ethnic conflict etc. are the great hindrance for sound implementation of micro finance programme.
4. Due to lack suitable training programme and capacity building programme for the micro finance official loan officers etc. has not sufficiently execution of micro-finance programme.

5. Lack of proper micro finance institutions and appropriate funding system at lower rate have created problem to run the micro-finance in this Region.
6. Lack of proper micro finance distribution channel and better delivery mechanism.
7. Lack of Simple regulatory environment and proper mobilization of available Resources.
8. Uneducated rural as well as semi urban and urban people have hindrances the swift... Driven of micro finance programme in this region.

**Conclusion:** Micro finance is an effective tool for economic up gradation and poverty alleviation scheme. The Asian development bank (finance for poor, Micro Finance Development Strategy 2000) has recognized microfinance as a powerful tool to promote economic growth reduce poverty, support human development and improve the status of woman.

In India near above 70% live in rural area. Most of them are small and marginal farmers. Due to lack of proper education and sound social infrastructure as well as distress socio economic circumstances Indian society have not showed so much up gradation which has been expected. On the other hand like other parts of the country, Northern Eastern region having huge development potential, the economy of the region remained under developed as it is characterized by poverty, under utilized man power and untapped natural resources. The North Eastern Region is basically depending on the agriculture sectors. For the last two decades Indian economy has been growing at a faster rate due to impact of liberalization, privatization and globalization. The new economic reform policy have great influence of its economy as well as North Eastern Region of course there have shown major regional imbalance between North eastern Region and other parts of the country. So, remove this situation micro finance have played an important role in the region like other parts of this country. The MFI like NABARD, RRB, co-operative societies, Nedfi etc. have been emergence the micro finance programme with the help N.G.O., SHG and state government efforts. The state of Assam have started SHG to crop up in almost every district in Assam a sizeable number of micro finance since 2000. Near about 66125 SHG roughly cover 1 million people in the state of Assam presently. Other states are also not sufficiently SHG formed in this region. Ultimately, it may be said that micro finance have not taken wide role in the NER during last two decades. Of course its prospects and importance have impact a positive aspects for the economic upgradation and micro finance expect one would be main tool to remove poverty and underdevelopment in this North Eastern Region.

## Caste system among gorkhas: with especial reference to martial race theory

\* Dipak Bajgain

**Abstract-** Among Gorkhas, Khas were the first people who were completely hinduized by the migrants Hindu of Indian plain. Thereafter, the process of hinduization of other tribes started, later on the process of hinduization becomes synonym of Khaislization (among Gorkhas). Different tribes like Rais, Lambas, Gorungs, Magars, Tamangs, Khas etc are jointly known as Gorkhas. All these tribes have their own dress, culture, language, social norms and religious Guru (teacher) etc. After all it can be said that these tribes are complete among them and can be regarded as separate tribes. But the appointment of Upadhyaya as religious teacher in every Gorkha regiment greatly reduced the importance of religious guru of respective tribes and it helps in the speedy Khaislization of those tribes in both traditional and new home (where they settled newly, especially around their regimental headquarter). The growing importance of Khas Brahmanas led to the expansion of Khas culture and language (Sinoi) among other Gorkha tribes or caste. On the other hand languages and culture of Gorkha tribes other than Khas lost their importance. At last it can be said that the caste base theory of Martial race for Gorkha Recruitment has greatly encouraged caste orthodoxy among Gorkhas. As only a person belongs to a pure martial caste got recruited as soldiers in Gorkha regiment, they try their best to maintain caste purity, which led to the caste base conservatism among Gorkhas.

**Key words:** Caste system, Migrants Hindu, Hinduislation

Gorkhas are people of Himalayan region including Nepal, Bhutan, India (Sikkim, Darjeeling, Himachal, Dehradoon-North East India etc). On the other hand it can be said that Gorkhas are the inhabitant of erstwhile Gorkha kingdom, which included present day Nepal and territory merged with British India according to the treaty of Sugauli of 1816. Regarding origin of Gorkhas Gorkul Sants mentioned:

The tendency to refer to themselves as Gurkhas is rooted in the reputation for valour the community earned initially in overrunning the whole of the Sub-Himalayan region. For the military man, it is a pride to be called a Gurkha. "Gurkha" thus gained ground as a martial term and remains so even today. The word Gurkha itself, some say, has its origin in the name of Gorakhnath, an Indian mystic of yore. "Gorakhnath ki Jai" was once the

## **Effect of entrepreneurial networks on small firm performance in Kamrup, a district of Assam**

#### Methodology

**REFERENCES**  
Bartolucci, S., & Goriely, A. (2003). The effect of  
income inequality on the demand for public  
goods. *Journal of Public Economics*, 87, 183-205.

八

The study is an attempt to examine the potential effects of environmental awareness on plant life performance with the help of primary data. University of Environmentally friendly V. M. S. study are framework, structure, key, strategy and synthesis and review types. It is descriptive and supported the promotion of the multi-dimensions of plant form of Arnefeld's theory of plant. The evidence is shown with the help of hierarchical approach model. We study shows that, resilience, stability and variability have a positive impact on the environmental management, monitoring and evaluation strategy in the application. Our study is contributing to more better future planning strategy and management by giving insights. Therefore, authority and other management by action, decision making and policy.

第10章

The term "entrepreneurial network" refers to entrepreneurs, who are connected, but mostly ex-externally, with the aim to increase the efficiency of the members' business activities.<sup>7</sup> According to Hulten, Chonko & Mead, (2001) networking is an activity by which entrepreneurs obtain information about new entrepreneurial ideas. In traditional economic theory, the main factors of production are land, labour, capital and entrepreneurship. Blalthomayya and Ahmed (2006) state that apart from land, labour, capital and entrepreneurship, every entrepreneurial outcome involves a component of networks which could be used for protecting business or increasing the efficiency in business processes. Many scholars have asserted that business support and networks can be identified as a crucial environment (Hulten, Mead & Tolosa, 2002; Hulten & Tolosa, 2003). Furthermore, Almenberg, Hulten & Tolosa, 2005. According to Gaskins et al. (2000), although scholars give a lot of the attention to resources, markets, information and relationships, they found that the position and placement of firms can also better be understood by considering the context of relationships in which firms are placed. For instance, three entrepreneurs follow their supplier and customer network of support during the purchase process (see Table 1) to gain benefit (Cuglielmo & Tolosa, 2006). From earlier studies it can be said that networks are a significant factor in the development of entrepreneurial businesses. Furthermore,

## Historical perspective of Ahom Period of Assam kingdom :- An Empirical Study

**Author:** Dr. Nayan Kalita  
**Associate Professor & HoD**  
**Department of History**  
**Goreswar College, Assam, India.**

The perception has long been intended to be generated that the "North-East" is a landlocked region, with geographical isolation playing a significant role in its economic backwardness. Not to mention the pre-Ahom period, when Assam, primarily comprised of the Brahmaputra Valley, had quite an active interaction with the northern parts of the Indian subcontinent. Even under the Ahom rulers (1328–1826), known for their closed-door approach, there was active trade between Assam and her western neighbours, Bengal and Bihar, as well as Bhutan, Tibet, and Myanmar. "The kingdom of Assam, as it was established during the last 140 years of Ahom rule, was surrounded on the north by a range of mountains inhabited by the Bhutanese, Akas, Dafias, and Aboes; on the east, by another line of mountains inhabited by the Akas, Dafias, and Aboes," historian S.K.Bhuyan writes. hill people bounded on the north by the Mishmis and the Singphors; on the south by the Garo, Khasi, Naga, and Pithai hills; on the west by the Marmas or Manaha river on the north bank and the Habraghat Parpannah on the south bank in the Bengal districts of Rangpur. The kingdom where it entered from Bengal began at the Assam Cheky (gate) on the north bank of the Brahmaputra, opposite Goalpara, and the kingdom on the south bank began from the Nagurberi peak, 21 miles east of Goalpara.

"The kingdom was around 500 miles long and 60 miles wide on average." The aforementioned boundaries had remained stationary since 1682, when the Moghuls were finally driven out of Lower Assam and the original western boundary of the Marmas River was restored. Assam's Ahom kingdom so approximately correlates to the Brahmaputra Valley Division's five districts, Kamrup, Darrang, Now gone Sibs agar and Lakhimpur, as well as parts of the Sadiya Frontier Tract." Bhuyan (Bhuyan 1974: 1) [Today's Assam is made up of these districts plus the Goalpara region, excluding the

## Mamang Dai's *The Black Hills*: A New-Historical Reading

\* Golcan Basumatary

*Abstract-* Mamang Dai throughout her historical novel *The Black Hills* has opened the possibilities to look back at North East India, specially her land, Arunachal Pradesh and Adi people through the colonial experience we have gone through. In attempt she is trying to dig and remember the plural history of the region. Firmly rooted to the soil of her birth place; rivers, mountain, trees, jungles, rituals, legends, mythology, dances, and villages, Dai talks about the mystery that shrouds the origin of the people of her region. Since the Adi tribe has no records of history, the rich oral tradition and the mythical stories becomes a process of historiography through her artistic craftsmanship. In the present novel Dai reawakens a chapter of North-East India which is largely ignored by the mainstream historians with a delightful blend of myth and history of Ahom and Misoree tribe, and also portrays a community's love for their own land, culture and identity that they had inherited from their forefathers. In this paper an attempt has been made to study the text from New-historical perspective.

**Key Words-** New-Historicism, Adi Tribe, Arunachal Pradesh, Land, Missionary.

Writing back of history through a work of fiction in a way that has not been recorded before and that needs to be rewritten, seeks to reconnect a work with the time period in which it was produced and identify it with the cultural and political movement of the time. Here historians' view is not seen assimilating with what traditional historians have said and written about a particular but crucial period the people on land witnessed offering how the historians' interpretations of a topic have gone through changes over the time, and where and what are the grounds of disagreements between historians. The colonial historiography was incomplete and without a balanced view of the people and their actual history. However, in the post colonial period, an attempt was made by the historians to write composite history of underrepresented regions. In the words of Frederick Turner 'Each age tries to form its own conception of the past. Each age writes the history of the past anew with reference to the conditions uppermost in its own time.'

Historiography is mostly important for all historians facing a sense of

Online Available: 03-Sep-2020

### Keywords:

Bodos,  
Livelihood,  
Inter-generational,  
Intra-generational.

### ABSTRACT

The objective of this paper is to examine the pattern and intensity of inter-generational and intra-generational changes in livelihood, taking the case of the Bodos, the largest scheduled tribe of Assam, India. The data for the study has been collected from 1161 randomly selected Bodo households in Bodoland Territorial Area Districts of Assam. The intensity of inter-generational and intra-generational livelihood changes has been measured through a rate developed for the purpose. Further, the association between the livelihood attributes has also been tested. The study finds that the intensity of intra-generational livelihood change is less than that of the inter-generational change. Livelihood change is more prominent from the farm to the non-farm sector. Though livelihood changes have taken place between the generations, the sectoral selection of livelihood by the present generation is closely associated with the livelihood of the preceding generation. Steps for infrastructure development to unfold farm and non-farm sources of income are required. Agro-based industrial units should be promoted, and required skill development initiatives should be taken so those poor households can diversify their livelihood portfolios.

### Contribution/ Originality:

The paper explains the livelihood changes from the generational perspectives examining both inter-generational and intra-generational livelihood changes and contributes towards understanding the changes that have occurred in the traditional ways of living, giving due consideration to the area-specific conditions. It explains a rarely addressed association between the main occupations pursued over the generations and within a generation over time.

RESEARCH BRIEF

## Extent of Rural Livelihood Diversification: The Case of the Bodos of Assam, India

Pritibaraj Swargiary\* and Arunjoyoti Mahanta

Dibrugarh University, India

batamchao@gmail.com

Micro-level study on livelihood diversification provides a basis for understanding the local environment and external socio-economic and institutional forces that govern the livelihood options. Each society has some distinct socio-cultural, economic, and demographic context, which, together with the resource base, shapes the livelihood strategies chosen in society. With a unique background and varieties in needs, the rural economy is characterized by deficits in avenues for work, which leaves the bulk of the rural workforce either unemployed or in underemployed status. The difficulties in meeting the means and ends of life very often force rural households to opt for a strategy of diversified economic activities. This process by which rural families construct a diverse portfolio of activities and social support capabilities in order to survive and to improve their standard of living is referred to as livelihood diversification (Elkin, 1998). Livelihood is a multifaceted concept referring to what people do to generate revenue for living with the assets at their disposal and what they achieve by doing it in a particular context (Nuthof, 2004). It is the process through which individuals, households, or communities try to satisfy their various consumption and economic needs, grapple with uncertainties, and respond to new opportunities (Haan & Zoonens, 2005).

Tribal economies are also characterized by a lack of diversity in resources and hence, depend mainly on few resources. Many times the tribal society depend on local ecology, traditional knowledge, and organization for their livelihood. As tribal communities live to

live close to the bio-diversity rich landscape, they have acquired location-specific and unique livelihood systematic plan which is suitable for their indigenous knowledge that is passed through generations.

Suryanarayana (1983) has found that the backward tribal economy, which is characterized by an extremely low level of economic activity, could provide meager employment opportunities. Although 70% of the tribal population depends on agriculture, the sector provides livelihood hardly for four months in a year. During the off-season, they again become unemployed without any gainful employment. By and large, they try to manage livelihood through different kinds of sources like collecting minor forest produce, fishing, hunting, and cutting of firewood between two agricultural seasons.

The Bodos (Boro) are the largest tribal group of Assam. The Bodos are a branch of the Great Bodhi Group of the Indo-Mongolian family falling within the Assam-Burmese linguistic section (Bordoloi, Sharma Thakur, & Saikia, 1987). According to the 2011 population census of India, (Table A - 11 (Appendix) District-wise Scheduled Tribe Population) the Bodo population in Assam stood at 13,61,735, out of which 8,99,907 live in the four districts, namely Baksa, Chirang, Kokrajhar, and Udaguri. Although the Bodos are predominantly agriculturists, they utilize the available resources and opportunities through the skills that they have acquired over time. However, changes in their livelihood perspectives over time have been noticed.

## Geographical and Technological challenges during the First World War in Europe: Limitation of Gurkha's Khukri

Dr. D.L. Hukkipu

Assistant Professor, Department of History, GLR

Dipak Bajgain

Research scholar, Department of History, GLR

### Abstract

During the first half of 20<sup>th</sup> century, the world had witnessed two Great Wars. Both these wars were the outcome of the colonial rivalry between European countries over establishment of more colonies in the world. As a result of this colonial rivalry, entire world came under the flame of war, of which a large number of world population was victim. England mobilised its military resources to protect its interests. It was the first time British Indian army was mobilized in different parts of the world to defend and protect the colonial interest. The Gurkha Rifles Regiment along with other regiments of Indian army was engaged in different front of the First and Second World War to fight against the enemy. The Gurkha regiment took its baptism with modern war techniques and its ferocity during the First World War. The regiment, who came out from their homeland, had to face new geographical challenges, which were totally unknown as well as change to them. On the other hand, for the first time these soldiers from the hill confronted with the modern war techniques. Using historical enquiry this paper rely on both primary and secondary sources and investigates the geographical and technological challenges that the Gurkha regiment had encounter during the First World War.

**Keywords:** Geographical, War technology, challenges or problems.

## Introduction

The first half of the 20th century witnessed several historical events of world history which were of great importance in the progress of human civilization. Two great wars of human history, the First and the Second World War were also fought during that period. These great wars of human civilization changed the course of modern history. Both of these wars were outcome of the colonial rivalry that participated originated from Europe. The countries that centre on the establishments of more and more colonies in different parts of the world had placed the entire world under the flame of war. It victimized many countries and its effects are still seen today. England mobilized both of its military resources and other resources to protect its colonial empire. In the mobilization for war, the British took British Indian Army into the war front.

It was the first time that the British Indian army was mobilized in different parts of the world to defend and protect the colonial empire of its master. The Gurkha Regiments along with other regiments of Indian army were engaged in almost every front of the war fought England. The geographical setting and climate of the War front or zone they were placed was different from their homeland. They were exposed to a new geographical setting, climate and perhaps food stuff totally unknown to them. Despite of receiving drilling and training for the first time, the soldiers from the hills confronted the application of modern war techniques.

## Research Area

Research area of this paper is from 1914 to 1919 or the First World War and geographical area is Europe. But when comparing fighting ability and problems, the Second World War and Asia and Africa continent is also included as area of research.

## Objective:

The research objective of this paper is to examine different problems faced by the Gurkha Regiments during the First World War in Europe and its impact on their fighting ability.

## Methodology:

The research is based on the historical research methodology and the primary and secondary sources are used after proper analysis.

## Discussion:

The spark of the First World War sparked off when Gavrilo Prince was assassinated Archduke Franz Ferdinand of Austria on 28 June 1914. With the declaration of war on Serbia by Austria-Hungary on 28<sup>th</sup> July 1914 Germany and Russia mobilized their army as both of them were allies.

Austria-Hungary and Serbia respectively. Quick, France came to help Russia against Germany. Germany attacked Belgian territory, forced to Paris on 3<sup>rd</sup> August 1914. As a ally of France, England committed to protect Belgium and declared war on Germany. With the joining of Japan in the war against Germany, the war became inevitable. When the Submarines warfare of Germany became a threat to the American shipping traffic, the later joined the war on 6 April 1917. In this way, the war became a Global war. All the imperialist powers were divided into two power blocs. Allied powers and Central powers. Allied powers consist of France, United Kingdom, Russia, Italy, United States, Serbia, Romania, Japan, Belgium, Greece and Portugal. On the other hand, Central powers consist of Germany, Austria-Hungary, the Turkish Ottoman Empire and Bulgaria (<https://www.world-war-i.com>) (Strachan 2014:11-27). Poem, Tucker and Smith (2008: 42-53). Prompted by the competition for mobilizing native armies and regiments for the War, England had recruited even 45,000 non-combatant forces during the war besides dispatching no British Indian regiments including Gurkha regiments from India (Thompson 2018: 119). Total Indian military personals were mobilized in this war of which nine million were killed only because of fire-power technology. (Ompo/WORLD WAR I) The nature and nature of the war had completely changed. Now the war is one kind of modern tournament. Modern warfare was exposed in all its naked ferocity with the introduction of modern deadliest weapons. The introduction of modern warfare was a development during the war at Apo 2008:205). Certainly, it was a challenge to the forces including Gurkhas. Besides, the geographical setting of the warzone, being different from the homeland of the Gurkhas, the Gurkha regiment had encountered challenges as well during the First World war.

Region wise requirement of VC were by Gurkha

Victoria Cross won by Gurkhas in their fifteen war front during the First and Second World War.  
(Salter, Williams 2011: 118-120)

The Gurkhas who were recruited mainly from the Hill areas of the Nepal (including territory merged by the Simla Treaty), were ill-prepared for the war front not known to them to become the first line of victim. The new environment and introduction of modern deadliest weapons will be the major challenges they have encountered. They were engaged in various battles, fields that are spreading out across France, Gallipoli, Africa, Palestine, Malakhaian, Suez, Egypt and Mesopotamia. They became victims of the war. The Gurkha soldiers were expected even though aware of about the imperialist war that was going on (Sureshra 2002: 191-199).

The Gurkhas found themselves far from Indian soil, in difficult parts of the world where the weather was not hot and dusty (for most of the time), but freezing cold, snowbound, wet, damp and cloudy. And he was exposed to plastics and many industrialized places and equipped with heavily industrial and mechanized warfare. Now they are fighting in such landscapes, not in the hills and mountain slopes or draws in the sun-drenched flatlands. The importance of *Kukri* has decreased due to use of hand-rockets, grenades, dynamite, high explosives, pollutants, gases and extremely heavy artillery. The component of a new kind of lethal game for the Gurkhas were trench warfare, tanks, big guns and machine guns, aeroplanes, anti-aircraft guns and shell shock (Cress 2011: 107). The impact of geography and difficulties of Kukris is also proved by the number of Victoria Cross they have won in different war front. They won 12 Victoria Cross during the First and Second World War. Of these eight comes from the Burma front (where most of the battles fought in the hills region of North-East Frontier of India, generally known as Eastern Himalaya), and they were only two from the main war theatres against Europe (Italy and France, Western Front), and another two from Africa (Somalia and Egypt). The diagram given above indicates their performance in case of geographical variation (Bellamy 2011: 118-20).

The second challenge faced by the Gurkhas in war zone was disorientation with the well equipped German forces. On the other hand, Gurkhas were not equipped with the modern weapons sufficiently to face the forces of enemies. Soldiers of Gurkha Regiments were not equipped as per the requirement and temperament of the War. Compared to their British equivalent, soldiers of Gurkha regiments were lightly equipped; they had two machine guns instead of the initial four per

battalion, thirty field guns as opposed to seventy-six per division and no trench mortars and hand grenades. Moreover, A. Ferrea in his book *«Soldiers from the Hills: The Gurkhas»* writes that they (Kukhus) bid only second rate grenades (Ferrea 1988: 12).

The third adverse challenge faced by the Gurkhas was the changes in landscape and climate. It was reported that they were not able to adapt the bitter cold weather of the front. The Public Ledger reported that Gurkha soldiers were taken out of the trenches of France due to the cold feet (The Public Ledger, 1918: 3). The cold weather of France was completely different from that of the Hills of Nepal (the Himalayan region), and perhaps it was strange for the soldiers of Gurkha Regiments. They were not clothed as per the level of cold or they were inadequately clothed (The Public Ledger, 1918: 3), which made the condition deplorable about the weather faced by Gurkhas in Europe.

... and Gurkhas were to be faced with a type of weather they had not previously encountered, namely, the combination of moderate cold with considerable rainfall to produce the galeous especially on the western front" (Cham. 1945: 72).

When Gurkhas were returning from France due to frostbite and over cold, British officers tried their best to defend the fighting prowess of their comrades. This is proved from the statement of a British officer published in the Public Ledger, which ran as follows:

"They did have cold feet in the trenches, but the trouble was due to the weather and not nerves. Almost all suffered from frostbite, and half the toes of an entire division dropped off during our first winter" (Cham. 1945: 72).

Though they face the deadliest cold in Europe, it was said that Gurkha soldiers did not give up their hopes on the British Government. Their faith on the Government was so strong that they believed that the Government would warm up the sea water if possible (ibid). The Ashburton Guardian, on 6<sup>th</sup> of March 1915, reported a Gurkha soldier reiterating, "No doubt the Government would warm the sea for us if possible" (Ashburton Guardian, 1915: 5).

Another important problem faced by the Gurkhas was the trench warfare. As they had to fight alongside of the other regiments of the

of short stature composed mainly of European trenchers in which they found themselves for the first time were too deep for those men who were, on average, no more than five and a half feet tall. Trench warfare was completely unknown to them and they did not give them any chance to bring their natural ability into play, as in mountain and jungle operations. (Ferrea, 1966, 11)

## Conclusion

**Conclusion:** Thus, from the above brief discussion it becomes clear that Gurkha soldiers had to face lots of difficulties in the First World War. Gurkhas who were jungle and hill fighters, and known for their *Kukri* got baptised with the trench and modern war weapons during the First World war for the first time, they fought in a land, which was completely unknown to them. They were not accustomed with the climate of Europe; especially

# A Comparative Study of God in Hinduism and Sikhism

Prabin Kumbhare

Assistant Professor, Raigarh College

## Abstract:

A comparative study is most an important mode of comparative philosophical thought in between two and more studies. It is a method often used in the early stages of the development of a branch of science. Comparative Study can help the researcher to ascend from the initial level of exploratory case studies to a more advanced level of general theoretical models, invariances, such as causality or evolution. It is a research methodology in the social sciences that aims to make comparisons across different countries or cultures and religion. Thus, Comparative Study means "to find out the similarities or differences of the study." The word "religion" is derived from "religio" which came from the old French "religion". It may have been originally derived from the Latin word "religo" which means "godd-faith," "ritual," and other similar meaning. Or it may have come from the Latin "redigere" which means "to tie fast," or "bind together." In religion, place of God is most spiritual, thought and sense of deitability in various religious thoughts.

**Key Words:** Comparative Study, Religion, God.

## Buddhist Ethics and the Application of Non-violence for Attaining World Peace

Nijas Mehta [1]

### Abstract:

This paper epitomizes an attempt presenting Buddhist concept of non-violence or ahimsa, and for attaining world peace. The concept of non-violence is the worldwide tendency of which ultimate goal is the harmonious co-existence of all life forms in the universe. Non-violence is the central part of ethics in Buddhism. For Buddhism non-violence is not essential practice to be followed in order to lead a peaceful life. Moreover, it is indicating non-injury or absence of violence in thought, words and deeds. India's primitive opinion of non-violence, kindness, love and compassion necessary in today's globe where civilization are hostility for the reason that of religious conviction and countrywide more shielding diverges. These psychological worth subjects laid down by Buddha like non-violence, love, kindness, and compassion need to be incorporating as a shadow topic at an alternative of religious experience. Assassination is the primary conflicting of consideration. In support of Buddhism, if someone slanders us, extreme dislike him or her would be opposite to the Dhamma. No one develop into enlightened exclusive of consideration or compassion. The 84 years old, Dalai Lama stressed out that every one's internal worth is more essential than the external attractiveness. For him if we steps forward our inside standards we might to be pursue the path of ahimsa, kindness, love and compassion.

**Keywords:** Buddhism, Non-violence, Peace, Violence, Compassion, Enlightenment

**Article History:** Submitted: 21st March, 2021, Revised: 29th March, 2021, Accepted: 30th March, 2021.

### I. INTRODUCTION

The main aim of this research paper is to study, analysis the morality, precepts of Buddhism, and its resistance in opposition to violent behaviour along with assassination.

In Buddhist moral thoughts, simultaneously the reconciliation of peace and non-violence are focal point. It is renowned piece of evidence that the eventual intent of the Buddhist philosophy is to ascend nonviolent co-existence on the human race and for the accomplishment of long-term contentment and do away with all kinds of suffering. In this paper, we will discuss more practical concerns and analysis in applied ethics pertaining to human rights and will attempt to explore go up against non-violence, war and killing—from a Buddhist point of view. Devoid of harmonization and peace, contentment and ease would be not possible. Traditional Buddhist texts advocated the value of non-harming or ahimsa. The thought of shamed or harmlessness is especially smash with sympathy. In the contrast Dharmapada may be mentioned—‘one who is harmless towards all living beings is called a ‘noble soul’. Non-killing is the first of the five basic moral precepts of Buddhism. It appears not as a belief, but as a practical necessity to the intentional and aware path of Dhamma. It is a psychological necessity for self-development. According to Thich Nhat Hahn, not kill in the twelfth mindfulness training. In addition, the Dalai Lama stated that ‘firm commitment to non-violence’. In those primitive principles of Indian is that non-violence which is applying to all living beings including all animals. It is one of the cardinal virtues and an important tenet of Jainism where it is form of the palli-sahabavati and Hinduism and in Buddhism where it is the first of the five precepts.

The word ‘ahimsa’ is from the Sanskrit language and means ‘non-harm’ or ‘injury’ and is commonly translating into English as ‘non-violence’.

Buddha crudely us towards exemplify adore and sympathy near every being as opposed to revulsion as well as hostility, not only be in love with our acquaintances but in an even way for our adversary, or those persons who runnages around for does us harm. He articulates on the subject of international relations or non-violence in various sermons. According to him if somebody is assassination us, revulsion him or her would be opposing to the Dhamma. The focal point of Buddha's traditions is to study the interior nature, to come across within and to become conscious the nature of existence or the nature of personality or the circumstances of the persons. At what time we appear into the circumstances of the persons, we will apprehend the fact of the unenlightened personality to be total of worthlessness.

Buddha accentuates so as to brutality or violence is negative, non-virtuous act, and builds up the vigour of non-virtuous deeds. For him at all type of aggression is not good. M.K. Gandhi supposed towards ‘exclusive of non-violence it is not feasible towards search for and come across truth. In support of him, non-violence and truth exist consequently interlinked that it is almost unfeasible towards straighten out as well as disconnect them. Additionally he understood that these two are acquaintances the two surface of a coin.’ In usually non-violence means non-injury. In the narrower sense, it means non-killing and in this widest sense, it means harmlessness. For Gandhi these both are equal importance. It is foundation on the indispensable attitude of welfare of every being.

### I. INTRODUCTION

The main aim of this research paper is to study, analysis the morality, precepts of Buddhism, and its resistance in opposition to violent behaviour along with assassination.

In Buddhist moral thoughts, simultaneously the reconciliation or peace and non-violence are focal point. It is renowned piece of evidence that the eventual intent of the Buddhist philosophy is to ascend nonviolent co-existence on the human race and for the accomplishment of long-term contentment and do away with all kinds of suffering. In this paper, we will discuss more practical concerns and analysis in applied ethics pertaining to human rights and will attempt to explore go up against near violence, war and killing—from a Buddhist point of view. Devoid of harmonization and peace, contentment and ease would be not possible. Traditional Buddhist texts advocated the value of non-harming or ahimsa. The thought of ahimsa or harmlessness is especially attach with sympathy. In the context Dhammapada may be mentioned. ‘one who is harmless towards all living beings is called a ‘noble one’. Non-killing is the first of the five basic moral precepts of Buddhism. It appears not as a belief, but as a practical necessity to the intentional and aware path of Dhamma. It is a psychological necessity for self-development. According to Thich Nhat Hahn, not kill in the twelve mindfulness training. In addition, the Dalai Lama stated that “firm commitment to non-violence”. In most primitive principles of Indian is that non-violence which is applying to all living beings including all animals. It is one of the cardinal virtues and an important tenet of Jainism where it is first of the paramitas orvrat and Hinduism and in Buddhism where it is the first of the five precepts.

The word ‘ahimsa’ is from the Sanskrit language and means ‘non-harm’ or injury and is commonly translating into English as ‘non-violence’.

Buddha credits us towards exemplify advice and sympathy near every being as opposed to revulsion as well as hostility, not only be in love with our acquaintances but in an even way for our adversary, or those persons who runnages account for time as harm. He articulates on the subject of international relations or non-violence in various sutras. According to him if somebody is assassination we, revile him or her would be opposing to the Dhamma. The focal point of Buddha's traditions is to study the interior nature, to come across within and to become conscious the nature of existence of the nature of personality or the circumstances of the person. At what time we appear into the circumstances of the person, we will approach the fact of the unenlightened personality to be full of wretchedness.

Buddha accentuates so as to brutality or violence is negative, non-virtuous act, and builds up the vigour of non-violent deeds. For him, at all type of aggression is not good. M.K. Gandhi supposed towards ‘exclusive of non-violence’ it is not feasible towards search for and come across truth. In support of him, non-violence and truth exist consequently interlinked that it is almost unfeasible towards straighten out as well as disconnect them. Additionally he understood that these two are acquaintances the two surface of a coin. In usually sense, violence means non-injury. In the narrower sense, it means non-killing and in this widest sense, it means harmlessness. For Gandhi these both are equal importance. It is foundation on the indispensable attitude of welfare of every being.

<sup>1</sup>Gandhi, M.K., From Yatradharmic Acharya observations, Ch. II, pp. 13-15, Navajivan Publishing House, 1932.

The implement of non-violence is the incredibly central part as well as quintessence of Buddhism. Moreover, the practice of Buddha's non-violence beather ahead three prime grounds-

1. To facilitate liberation or deliverance be able to just private and personage;
2. To facilitate the sensation of sympathy is the basis of person moving, which means compassionate sharing in the agony of every being;
3. To facilitate at all vigorous curiosity even in moral behaviour would bring about configuration of the "will to live", and as a result multiply dissolution and agony.

Consequently, the criterions of life-contradiction have to be the leading moral principles of life. The pertinence in Buddhism is that is why on a subjective appreciation of the principle of non-violence, which possibly will escort to an interior inspirational of humans and their ultimate rescue. Again, the intentions of non-violence technique of suggest difficulty is to exalte the human being become conscious his or her faults and know about accountable and to alleviate the toughened judgment, thoughts and reactions in the antagonist.

## II. SIGNIFICANCE OF NON-VIOLENCE

The idea of non-violence has been the supreme asset of Buddhist ethical thoughts. The principle of non-violence is undoubtedly articulate in Buddhist ethics. It is the vital notions of Buddhist practice intended for accomplish reconciliation, which structures the considerate of nirvana. Buddhism in fact extensively recognizes for its look upon of conceded and non-violence like its basic desirable quality. Buddhism is perceptible for the admiring of non-violence as one of the essentially praiseworthy ethical qualities. It denounces grievance towards being of every one. Buddhism was not presently an unfeignedly reaction towards the act of hostility or assassination as evident in the ritual surrender. Buddhism furnishes extra post emphasis on to the significance of the intrinsic worth of adoration and empathy, which appearance the thoughtful practicalities of the theory of non-violence in its ethical field. Buddhism in addition highlight the constructive importance of the concept of non-violence in the nature of an full series of outstanding intrinsic worth of incomparable compassionate eminence of generosity to every formulation, condescension nearly others, cheerfulness with aptitude to others, errors. "Abhorrence does not end by abhorrence at any time, but it end through adores just, it is its nature" (Jain, 1943: 59). Non-violence is the coexistence of abhorrence except compassion, care for furthermore thoughtfulness. Negativeness of abhorrence or revulsion find insatiable, which is the basis of amalgamation of distinctive persons. It is unfeasible to accomplish nirvana exclusive of non-violence. In Buddhism, non-violence is stressing from the perspective of the view of sympathy, care for and benevolence on the way to every existing creatures. At the same time, it is also maintaining from the perspective of a patient and a feeling of shame, because of the cruelty involved in killing living creatures. Death is the most fearsome and terrifying thing for every living being. Every living being want to live. Taking life of others means

frightening other that lives. It refers to the striking and killing of living beings. One should himself abstain from taking life of other living beings, the intention to kill and should not be inspired others for doing so. Non-violence understands to be pursuing with admiration towards every existing creature given that all livelihood would like to live and frigid hostility. Considerate it usually refraining as of assassination, the Buddhist thought of non-violence is not inadequate to human beings just consist of every existing being. Yet again, non-violence is come together through deliberation and in the midst of the realization of embarrassment. As said by Buddha, kindness on the way to every existing creature is indispensable. The incentive towards annihilate or rust to be shattered all living being at or consent to the do something of those persons who do so, must be circumvent. Similar to Jainism, in Buddhism too, be in love with compassionate encompass the foundation and the optimistic worth of the motivation of non-violence.

Buddhist moral principles establish its useful ideas in the varied teachings. Rooting injure towards anyone whether within body, mind and cruel tongue is regarded as as violent behaviour. In Buddhism, by means of ruthless words roots impairment towards anyone psychologically or in other way. That is why, as said by Buddha it is regarding as committing violence. Usually the word 'ills' is interpreting in to English as 'righteous manners', ideology, moral principles or guideline. It is doing something devoted in the body, communication or wits along with entails a premeditated endeavour, which is one of the three-practices- sila, samadhi, and paticca. It enlivens to ethical wholeness of considerations, communicate, with an action. Sila is the basis of Samadhi or Bhavans or psychological development. There are quite many steps of sila, characterize 'essential morality', which is well known to the whole Buddhist schools. These are- Not harming any sentient life, not taking what is not given, no sexual misconduct, no wrong or harmful speech, not taking intoxicants. In the course of these five principles or precepts, not harming any breathing being is the former and indispensable step with ingenuous sympathy. The aforementioned five ethical principles of paticcasila speak the significance of the association of the human being near to any life form. It is picturing in Buddhism similar to right and responsibility. Seeing that it is apprehensive in Buddhist ethics, the right to life being means not to mention the vainglorious as well as consequential other than it understands what we have to do towards admiration of any living being. The idea of non-violence in Buddhism does not mean the threatening of assassination human being or any living things, nor does it means towards examine the first teaching or precept. It is strongly connect by each the moral values of paticcasila. With the purpose of teaching, the colossal code of non-violence in support of the communal, privates and virtues impusment each the malevolence manners and emotion for instance destruction anyone, straightforward, untruthful and to be regarded with suspicion, coexisting invigorating food and drink, having a tendency to abhorrence, obnoxious are to circumvent.

The principle of non-violence to the safeguarding of surroundings and understand in the course of its manners towards every types of being around us. For Buddha every

living being is consecrated, momentous and precious. Buddhism not just formulates observe human behaviour within kinship towards any person but also control person's behaviour in kinship to every existing life form as well as normal surroundings (Shatt, 2003: 201).

### III. CONCLUSION

Buddhism is a very practical religion and aspires at supporting people to live their lives peacefully. The moral principle of non-violence in Buddhist is held up in the configuration of above (maitri), consideration (karuṇā). The endorsement of these two circumstances of psychological expansion is the principally valuable ways in favour of creating a pleasant-sounding being entire in this world. The training of contemplation is human being extremely heart of the Buddhist system. Meditation or contemplation cultivates progressively more admired, seeing as its confirmed motivation towards equally psychological with corporeal happiness are flattering further extensively well known. In today's world is under sizing and susceptible intended for us to be alive irritably with unaccompanied, and hence forbearance, above and consideration are so important. The walkway of non-violence escorts to communal synchronization. Buddhism edifies the human race towards be alive exclusive of conflict and squabble in the midst of human. He edifies us how to amplify our understanding, encircled free-thinking ourselves. In favour of him, without a doubt, we survive cheerfully, not abhorrence any person amongst persons who disgust; in the midst of men who disgust or hate we be alive exclusive of revulsion everyone. For the Buddhist adviser we make an effort to diminish of the unsatisfactory judgment and promotion of the human worth. He also taught that the peaceful minds lead to peaceful speech and peaceful actions. In addition, if the minds of living beings are at peace, the world will be at peace.

## "A Study on Livelihood of the Bamboo Based: Challenges and Opportunities among the Rural People of Goreswar, Baksa District of Assam"

**Dr. Dilip Ch. Das,**

Associate Professor Department of Commerce Goreswar College,  
Goreswar (BTAD) Baksa, Assam

### Abstract

From being termed Bamboo as Poor Man's timber to being called 'Green Gold', the perception of Bamboo, a versatile grass found mainly in Asia and Africa, has undergone a drastic change. However this recognition of the usefulness of Bamboo existed even in the ancient times, as is apparent from the Rig Veda which calls upon the Gods to Bestow upon us a hundred Bamboo clumps. Only in recent years is it being increasingly realized what a valuable resource Bamboo is not only for the traditional subsistence economy but even the modern industrial one.

This paper is presenting the key challenges in sustainable livelihood opportunities to rural and tribal artisans in the bamboo sector and the financing options from formal financial and informal financial agencies. How access to various types of resources such as land, water, finance etc., is the key to supporting livelihoods of poor as all these have a direct impact on income and employment, especially for those in the unorganized sector. As one of the financing options, this paper provides the micro-finance overview, rural credit delivery system, formal and informal financial agencies, constraints of formal agencies and advantages of informal finance. This paper is looking into strategies for resource development and how the resources to be made available to poor and vulnerable to make livelihoods more sustainable. Also presents a case study on Goreswar areas, brief report on Bamboo resource and its utilization and livelihood options of rural and tribal people in Baksa district of BTAD a tribal areas in North East India.

**Keywords:** Green Gold, Bamboo, Bamboo based Products, livelihoods, development, employment opportunity, etc.

**Introduction:** Bamboo, "the poor man's timber," is one of the most important forestry species with wide distribution throughout India. Bamboo has made a major contribution in the rural economy in most of the states of the country. Bamboo has been an important source of income for millions a rural people for sustaining their livelihood. The various

physical and mechanical properties of bamboos make them suitable for a variety of purpose. The use of modern industrial techniques allow the use of bamboo in wood based industries, to provide bamboo based flooring, panels, bamboo sticks, bamboo for paper and pulp industries, handicrafts and weaving products, bamboo housing, bamboo furniture, stationary, showpieces, bamboo based gasifier for electricity, bamboo based fuel, bamboo based fiber and fabric, bamboo based food products, construction and structural application and also in agricultural applications. Bamboo represents one of the world's best natural and renewable resources with large number of uses and applications which serve as an eco-friendly alternative to the rapidly depleting wood resources. They are found in diverse climate, from cold mountains to hot tropical regions. They are of economic and high cultural significance in East Asia and South East Asia where they are used extensively in gardens, as building materials and million of people worldwide depend on bamboo for their livelihoods.

#### **Objectives of the study:**

1. The study has conducted with keep in mind the following objectives;
2. To study the importance of Bamboo industry as an entrepreneurship and rural development.
3. To study and examine the aspect and scope of Bamboo industry in the Baksa district of Assam.
4. To provides useful suggestion from the study.

#### **Research Methodology of the Study:**

**Population:** The present study is based on mainly primary as well as secondary data is needed for doing in practice. The data is collected from a field survey of the different taluka of Baksa district of Assam. A self-structured questionnaire assessing the various people from the working on the Bamboo industry. The 50 respondents are selected as a sample for the study, i.e. symbolically Total of  $N = 50$  respondents.

**Research Design and Tools:** The district of Baksa is selected for the study of survey cause of its a very suitable place for economic growth and environmental for the activities of Bamboo industry. On this regards, this paper is based on descriptive or ex post facto research which includes the surveys and fact-finding enquiries of different kinds and the major purpose of this research paper is descriptive of the state of affairs as it exists at present. The research tools is of the study has been adopted well known branch of descriptive analysis of factor by using one sample t-valuated to identify the nature of responses of the respondents.

**Sample Design:** Here I have to used the judgment or deliberate or non-probability sampling method to select the sample for such type of activities. I tried my level best to make it highly representative sample. A survey was conducted to collect necessary data upon the type of activities of 50 members (sample respondents) of various bamboo industries which located.

### **Role of Bamboo in Rural Development:**

Bamboo has an important role to play in development. It is a natural tool with which to encourage sustainable, integrated farming systems and an excellent resource on which to build a variety of income and employment-generating opportunities. With its multiple uses and high value in a range of products aimed at national and international markets, there is great potential for value-adding operations, and many different entry points for development interventions which are accessible to and appropriate for resource-poor people. In order to do this well, improved understanding is required about the bamboo sectors, about the people involved and about the main problems they face. Research is needed on the economic, policy, institutional and social aspects of the bamboo sectors, as well as on the technical aspects involved. In this way, interventions can be focused to address the real problems and opportunities faced by people, and from this basis a well-targeted research and development agenda can be designed.

### **Bamboo based Products and Its Application an Appraisal:**

Literature regarding the multiple uses of bamboo highlights the utility of bamboo for house construction, bamboo-ply, agricultural implements, handicraft, irrigation, brooms, medicine, food, fuel, fodder, paper & pulp etc. especially bamboo as a perfect substitute for some wood based products. The products that can be made from Bamboo can be broadly be categorized into:

1. Wood Substitutes and Composites,
2. Industrial Use and Products,
3. Food Products,
4. Construction and Structural Applications.

Apart from this broad classification various handicraft and cottage industry products are also made from bamboo. However, this category of products is not discussed as bamboo based industrialization and its prospects limit the scope of the study. Also the input of bamboo as a resource raw material in the paper and pulp industry is also not explicitly dealt with as a bamboo based product but discussed in the next chapter under the resource situation in India.

#### **Wood Substitutes and Composites:**

This category of products essentially comprises of boards and sticks of varying descriptions and uses, and which can further be used to manufacture finished products like wooden floors or blinds or goes into another industry as an input like incense sticks.

**Bamboo Furniture:** Traditional bamboo furniture uses natural round or split bamboo. A new type of pack-flat, knockdown furniture uses glue-laminated bamboo panels. Unlike the traditional design, this furniture may be shipped in compact flat packs, to be assembled on the spot. The new design overcomes many of the problems of traditional bamboo furniture, such as high labour and transportation costs, low productivity, instability, varying quality and susceptibility to insects and fungi. At the same time, it retains the distinct physical, mechanical, chemical, environmental and aesthetic features of bamboo. Export of laminated bamboo furniture is growing rapidly. However, trade statistics currently do not capture the

value, owing to the absence of a special code for bamboo furniture. It is usually classified as wooden furniture.

#### **Food Products:**

Under this category, it is essentially bamboo shoots that are consumed after being cooked. Bamboo shoots carry the potential of value added economic activity at the entrepreneurial and community level through cultivation, processing and packaging. Its use in food and cooking goes far back in history. China earns US\$130 million annually from exports of edible bamboo shoots. About 200 species of bamboo can provide edible and palatable bamboo shoots.<sup>4</sup> Fresh bamboo shoots are delicious and healthy, with high fibre content. Bamboo vegetables can be found in Chinese grocery stores and restaurants worldwide. After cooking the shoots are still crisp, because cooking does not destroy their texture. Cooked bamboo shoots can be stored in containers and shipped worldwide.

#### **Industrial Products**

Traditionally the industrial use of bamboo has been in the paper and pulp industry. Apart from this, the industrial products from Bamboo, essentially comprises of converting into fuel or electricity through gasification. Through pyrolysis, bamboo can be converted into three valuable products - bamboo charcoal, oil and gas. Changing the pyrolysis parameters can change the product shares depending on the purpose and market conditions. Bamboo based producer gases can be used as a substitute for petroleum. Bamboo charcoal is an excellent fuel for cooking and barbequing. There can also be the use of activated charcoal. This is used as a deodorant, purifier, disinfectant, medicine, agricultural chemical and absorbent of pollution and excessive moisture. The industrial use is using bamboo waste for gasification and thereby producing electricity.<sup>5</sup>

#### **Construction and Structural Applications:**

Advances in structural engineering and the development of bamboo composites have opened new vistas for lightweight, durable and aesthetic construction for a variety of applications, enabling informed choices for housing, community and functional structures.<sup>4</sup> Within monopodial bamboos, the main species are *Acidosasa edulis*, *Chimonobambusa quadrangularis*, *Phyllostachys heterocycla* var. *pubescens*, *P. praecox*, *P. dulcis*, *P. iridescens*, *P. makinoi*, *P. nuda*, *P. prominens*, *P. sulphurea* cv. *viridis*, *P. vivax*, *Pleioblastus amarus* and *Qiongzhuea tumidinoda*. Within sympodial bamboos, the main species are *Bambusa rigida*, *B. perversa*, *Dendrocalamus latiflorus*, *D. asper*, *D. brandisii*, *D. hamiltonii*, *Dendrocalamopsis oldhami*, *D. beecheyana*, *D. beecheyana* var. *pubescens*, *D. stenoaurita*, *D. vario-striata* and *Schizostachyum fungiforme*.

**Bamboo housing:** There are three main types of bamboo housing. a) traditional houses, which use bamboo culms as a primary building material; b) traditional barbecue bamboo houses, in which a bamboo frame is plastered with cement or clay; and c) modern prefabricated houses made of bamboo laminated boards, veneers and panels. These buildings are usually cheaper than wooden houses, light, strong and earthquake resistant, unlike brick or cement constructions. New types of prefabricated houses made of

engineered bamboo have distinct advantages. They can be packed flat and transported at a reasonable cost. They are better designed and environmentally friendly.

#### **Bamboo based Industrialization Prospects and Problems:**

This natural resource has played a major role in the livelihood of rural people and in rural industry, especially in tropical regions. Over 2.2 billion people the world over are dependent on bamboo and its related industries for income, food, and housing. Although the rural communities have traditionally been using bamboo, the utilisation has been highly localized as bamboo has often been viewed as an inferior substitute of timber. For example, although over 1 billion people in the world live in bamboo houses, yet there has been little effort to build such houses (using pre-fabricated structures or otherwise) commercially. Traditionally, bamboo has been harvested in the natural forest and its use has been limited to temporal constructions and low-quality utensils prone to rapid decay. Consumption or utilisation has therefore been direct and restricted to poorer people with low income and low purchasing power. Market linkage has as a consequence been weak or non-existent in most countries including India.

#### **Bamboo made products and it's Employment Opportunities:**

Bamboos generate large-scale rural employment in the management of bamboo forests, and harvesting, collection, transport, storage, processing and utilization of bamboo. On the basis of current production of bamboo and its uses in India, it is estimated that a total of 432 million workdays and Rs. 13 billion in wages is generated annually. Enough scope exists for increasing bamboo yields by two or three times in a short period using higher inputs of labour and investments. The increased productivity can fill the gaps in the availability of this ecofriendly material to users both in rural and industrial sectors to generate large-scale employment, eliminate imports in pulp and panel industries, and improve the living conditions of the rural poor, many of whom depend on bamboos for their livelihood. Policy changes with regard to land laws, investment, credit priorities, imports, taxation, etc. can strengthen and hasten this process. There are founds most of male respondents, the majority of age belongs to 31-39 years. Most of bamboo industry is founds on proprietary. The demand of bamboo made products is more. The bamboo products are highly international basis. The entrepreneurs are help from Bank and Financial institution.

#### **Regulating the Bamboo Sector:**

The Central laws pertain to forestland which is the property of the government. In other words, the central laws do not apply to private forests or private plantations. There are three central Acts that govern forest and forest produce. These are the Indian Forest Act 1927, the Forest Conservation Act 1980 and the Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006. Before proceeding to understand how these laws affect bamboo plantation, harvesting and transportation, it is imperative to outline the objectives that all these three laws purports to achieve. The Indian Forest Act 1927 is the single most important piece of legislation on forests.

**Limitation:**

There were several constraints that were identified in the course of the roundtables and field visits as well as from secondary sources. These can be listed as follows:

1. The regulatory constraint on transit of bamboo as well as on harvesting from private plantations,
2. The irregular supply of bamboo to industries,
3. Poor market linkage of the products, Technology application for new product design along with testing, certifying of products.
4. Lack of an institute on bamboo application and technology, Lack of application of known scientific methods in plantation, poor post-harvest treatment, and up-gradation of skill formation, Waste utilization, and Competition from Chinese products.

**Recommendations:**

The evaluation team strongly recommends continuation of the project into a second phase with the following studies

1. Development of low-cost resin. Using lignin from black liquor from pulp mills has so far shown promise and this work should be brought to a successful completion with mill trials and a manual for preparation and use of the modified resins. Consideration should also be given to a modified UP resin for countries like Bangladesh, Thailand, and China. These countries have either traditionally used UF resins for interior applications for decades or have a source of supply of UF resin.
2. Development of a more cost effective manufacturing process with consideration for health and safety of the workers. Using environmentally friendly wood preservative in the process has shown great promise and this work should be completed.
3. Manuals for manufacturing bamboo mat boards with easy to follow instructions on each step of the process should be completed.

**Suggestion:**

1. New areas of studies that warrant immediate attention are Initial Awareness Programme.
2. State of art of bamboo mat board production and use in the region.
3. Mechanization of sliver making and weaving. A recommendation is made for IDRC to assist in procurement of a mechanized sliver making and weaving working unit for IPIRTI. This will greatly assist in further research and optimizing manufacturing parameters for consistently good quality bamboo mat board.
4. Thicker bamboo mat boards as a second generation of products requires a steam-injected board manufacturing technology. The evaluation team recommends that the Forintek Canada Corp. proposal for thicker board production should be supported for IDRC funding.
5. Impact of raw material supply has not been a part of this project in the past.

**Conclusion:**

Bamboo has an important role to play in development. It is a natural vehicle with which to encourage sustainable, integrated farming systems. It is an excellent resource on which to build a variety of income and employment-generating opportunities. With its multiple uses, and high value in a range of products aimed at national and international markets, bamboo

shows a great potential for value-adding operations, and many different entry points for development interventions. Bamboo is not just a crop for poor people: it can generate important political and economic support which, if things are managed well, can translate into true sustainable development. Bamboo also provides an excellent model on which to base the development of other non-timber forest products.

## A Study on Microfinance among Rural People of Kamrup (R) District of Assam

Dr. Dilip Ch. Das

Asst. Professor, Department of Commerce, Goreswar College, Assam, India

### Abstract:

The history of micro-finance can be traced back to the middle of the 1800s when the theorist Lydia Miller Spooner was writing over the benefits from small credits to entrepreneurs and farmers as a way of getting the people out of poverty. On the other hand, Friedrich Wilhelm Raiffeisen also founded the first cooperative lending banks to support farmers in rural Germany. The formal concept of micro-finance is the brain-child of Nobel Laureate Prof. Muhammad Yunus of Bangladesh Grameen Bank way back in 1976. Since then microfinance has been developed as an alternative credit delivery system which caters to the needs of the poor locally involving them in the system itself. It has been in practice in varying forms in different countries and is regarded as an important tool for economic empowerment. According to World Bank estimates, there are over 500 million people who have directly or indirectly benefited from microfinance-related operations. The Asian Development Bank (ADB) has defined microfinance as follows: "The provision of a broad range of financial services such as deposits, loans, payment service, money transfers and insurance to poor and low income households and their micro enterprises." Micro-finance has been envisaged as the new development paradigm for alleviating poverty through social and economic development of the poor. The role of micro finance institutions in bringing about inclusive growth is immense. Microfinance is an intervention parameter to ensure micro outreach and deep penetration which ensures a step towards empowerment of marginalized section of the society. It seeks to provide services of high quality, at affordable prices, in convenient locations, and with dignity. This in turn helps in promoting economic development, employment and growth by reducing the level of poverty in the country.

**Keywords:** micro-finance, Bangladesh Grameen Bank, important tool, economic empowerment, empowerment of marginalized section of the society

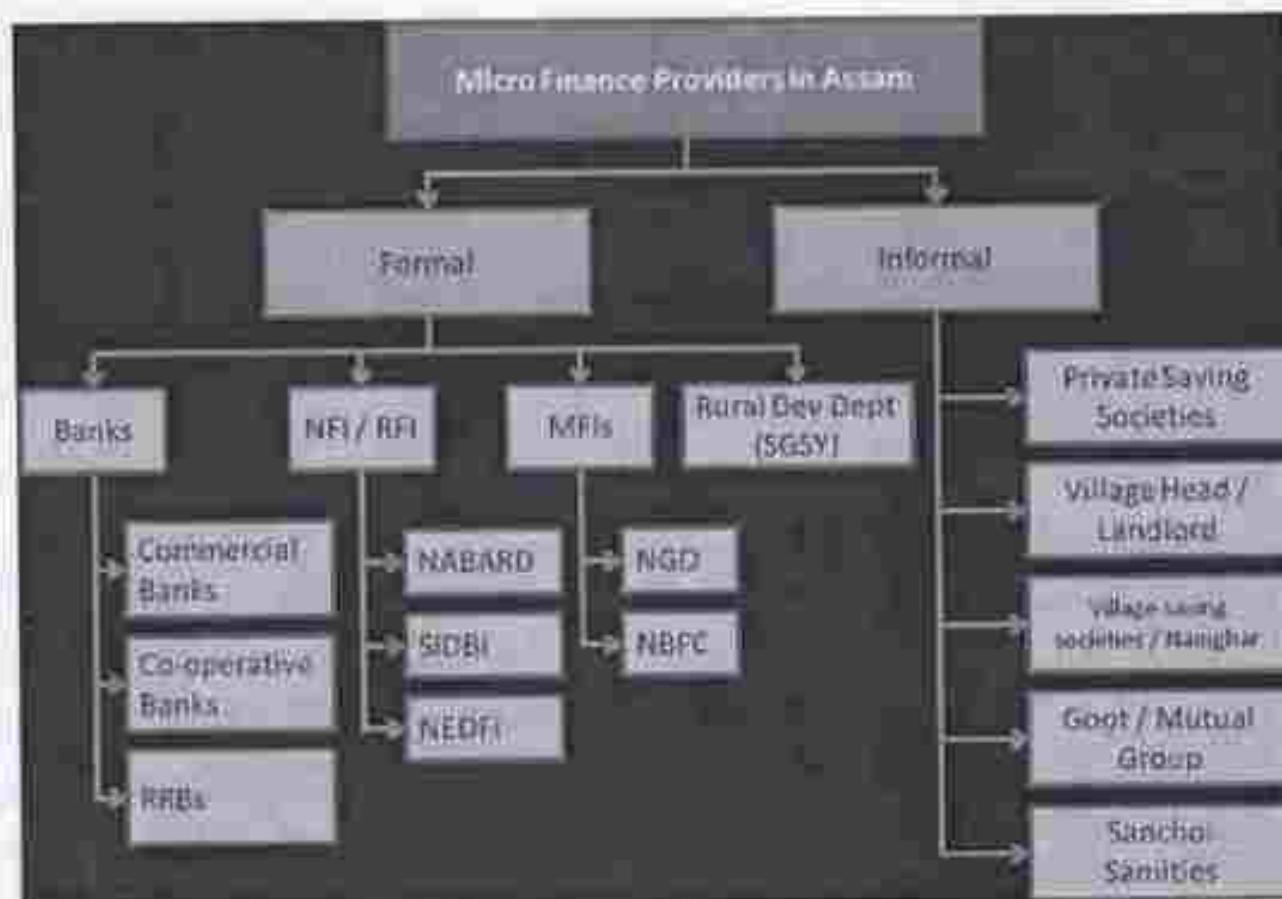

**Introduction:** Microfinance is a kind of banking service that is provided to jobless or low-income persons or groups who would have no other means of fast financial services. Microfinance is an useful tool for poverty lessening and humanizing socio-economic status of rural people. It plays a major role in rural development. Microfinance is the provision of

financial services to low income customers; solidarity lending groups and self-employed who traditionally lack access to banking and related services. Microfinance also plays a significant role in improving the small entrepreneur's lives and secures a better prospect. Microfinance can be an extremely helpful force on the economic development of persons, communities, and the nations in which they be present. It is believed by many that by offering credit and reserves opportunities to members of the general public to whom these services are not regularly available. Microfinance institutions can facilitate the economic growth of these individuals to help them to significantly improve their standards of livelihood. In areas of the world where many do not readily have access to banking services, the presence of microfinance institutions can be an extremely important force in narrowing the gap between the rich and the poor. Microfinance helps to reduce the employment problem in the country and also helps to get rid of poverty in the country. Microfinance aims to inspire private enterprise among those who suffer from poverty to self-employment and develop that small business and improve their status and social life and thus improve the status of their families and their children in term of standard of living on the one hand and level of access to social service on the other. Microfinance is the condition of financial services such as loans, savings, insurance, and training to people living in poverty. It is one of the great success stories inside the developing world in the last 30 years and is widely recognized as a just and sustainable solution in alleviating global poverty. The industry began by providing small loans to rising entrepreneurs to start or expand businesses. Opportunity International was one of the first nonprofit organizations to recognize the benefits of providing capital to people struggling to work their way out of poverty. Over the years, with Opportunity leading the way, the microfinance sector has expanded its financial service offerings to better meet client needs. Next to is with providing more flexible loan products and business and personal development training. Opportunity offers savings and insurance to help clients effectively navigate the daily hardships they face. Without these services, clients are continually at risk of slipping back into poverty because of unforeseen circumstances.

Microfinance has become a household name as a result of the benefits accrued by the poor from its services (Microfinance India – State of the Sector Report, 2009). It has evolved from cooperative saving societies to a rapidly growing formal sector. The North Eastern Region (NER) of India poses an interesting case for the study of Indian microfinance. The region's unusual topography, low population, low level of commercialization and infrastructure, transport, communication and power bottlenecks have restricted in reaching and spreading of financial services to the poor(Nair, 2010-11). As a result, formal microfinance initiatives began later in NER than the rest of the country.

Kamrup Rural population constituted 4.87 percent of total Assam population. In the demographic pattern of the Kamrup district is a heterogeneous one. Various ethnic groups like the Koch-Rajbongshi, Kalitas, Brahmins, Gosains, Rabhas, Boros, Garos, Hajongs, religious and linguistic minorities i.e. Muslim and both Hindu and Muslim Bangalis etc.

are the main ethnic groups that inhabit in the district. All these different ethnic groups subscribe to different religious faith viz. Hinduism, Christianity, Islamic and Buddhism etc.

#### Literature Review:

Faheem Gul Gilal cited on his study 'Perception toward microfinance' that there is surprising clash do exist in urban and rural people's mind share; what they perceived is amazingly opposite to reality. Rural people have perception that they are taking loan more as compare to urban people but in reality it's erroneous. On the other hands urban people have perception that they are not taking loan as compare to rural people but in reality urban people are taking much more loan than rural people. There is also vast perception gap existing in urban and rural people about microfinance loan usage. Urban people get loan for pure intention to invest in business activities and personal use whereas rural people get loan for the purpose of using in agricultural activities and most importantly rural people never take microfinance loan for personal use.

- Perceptions of Microfinance in Cameroon: A Case Study of UNICS, Yaoundé, Ian Long SIT Study Abroad(2009) the project focuses on the ways in which these perceptions affect Volume-VII, Issue-V

the institutions, the actions of the institutions amidst and in response to these perceptions, and to what extent these actions have a positive effect on the community and the firms themselves. Perceptions and opinions of microfinance in Cameroon tend to be positive on the whole. It is generally believed that microfinance is a force that greatly aids in the development of the country and in the alleviation of poverty. This generally held positive perception without a doubt has aided in the rapid growth in size and in number of microfinance institutions experienced since the early 1990s.

From both the study we can arrive in a conclusion that perception toward microfinance lead to growth of the microfinance institution and ultimately lead to development of the country. So it is the time to study the perception toward microfinance among the rural people and what they expect from a good microfinance scheme. If perception is not matching with the reality (what actually the microfinance policy is) microfinance institution should go for training programme among rural people so that their mindset towards microfinance facility changed. The microfinance sector has made remarkable strides in India over the years. Microfinance has become a household name as a result of the benefits accrued by the poor from its services (Microfinance India – State of the Sector Report, 2009). It has evolved from cooperative saving societies to a rapidly growing formal sector. The North Eastern Region (NER) of India poses an interesting case for the study of Indian microfinance. The region's unusual topography, low population, low level of commercialization and infrastructure, transport, communication and power bottlenecks have restricted in reaching and spreading of financial services (Nair, 2010-11). As a result, formal microfinance initiatives began later in NER than the rest of the country. Now my objectives of conducting this research is to know the perception of the people about Microfinance Institution in Kamrup rural district and what factors motivate and discourage them as well.

#### **Objectives of the Study:**

1. To find out perception of rural people (of Kamrup rural district) towards microfinance
2. To find out the extent of significance of microfinance in rural development.

#### **Limitation of the Study:**

1. Study time was very short so that sample size also very small size. It is difficult to represent a very huge population with a small size population so it may not be generalizable to Kamrup rural district as a whole.
2. Respondent were not so much cooperative. They thought that I am going to give them loan. So it was difficult to confiscate their misconception.

#### **Scope of the Study:**

1. Researchers can use the findings of this study for their further research.
2. Microfinance organization can make their policy based on this study.

#### **Methodology of the Study:**

**Research Design:** Descriptive and analytical

**Sample Definition:** Sample are taken from Rural people of Kamrup rural district. Probability sampling method is used in this study. So anyone of Kamrup rural district can be a sample for the study. The target population of this research that was sample is the microfinance existing customers as well as potential customers, who are living in kamrup rural district. Same number of male and female respondent from target population were taken for the study.

**Sources of Data:** There are two sources of data collection.

**Primery Source:** Structured questionnaire is prepared to get first hand information and distributed among the rural people of Kamrup rural district.

**Secondary source:** Books, magazine and internet are used for this study purpose.

**Research plan:**

Sample element: Rural people of Kamrup district.

Sample Size: Sample size is 30.

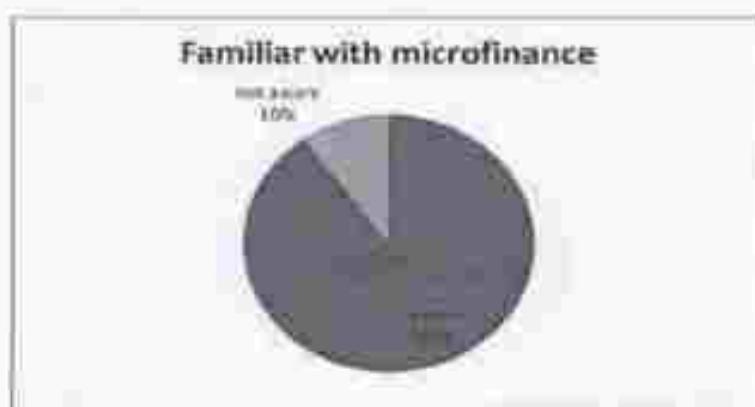

Sampling Frame: Within the people of Kamrup rural district

Sampling technique: Probability sampling technique was used.

**Data Analysis and Interpretation:**

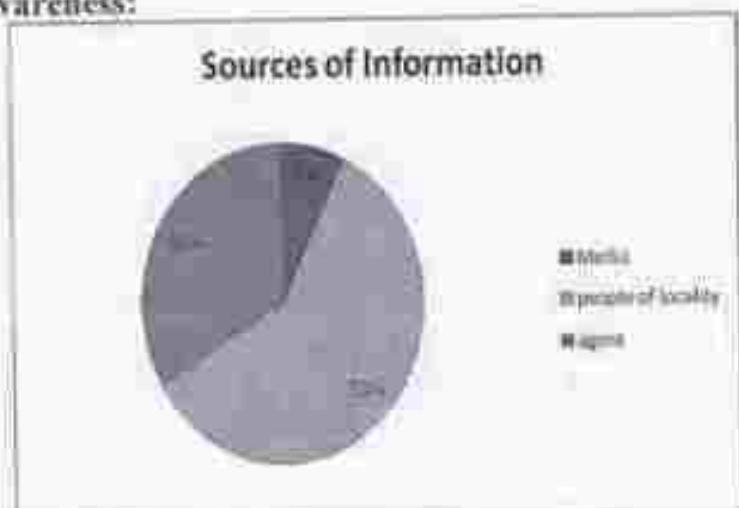

**Questions Relating To Perception of Micro Finance Institutions:**

**I. Awareness about Microfinance**

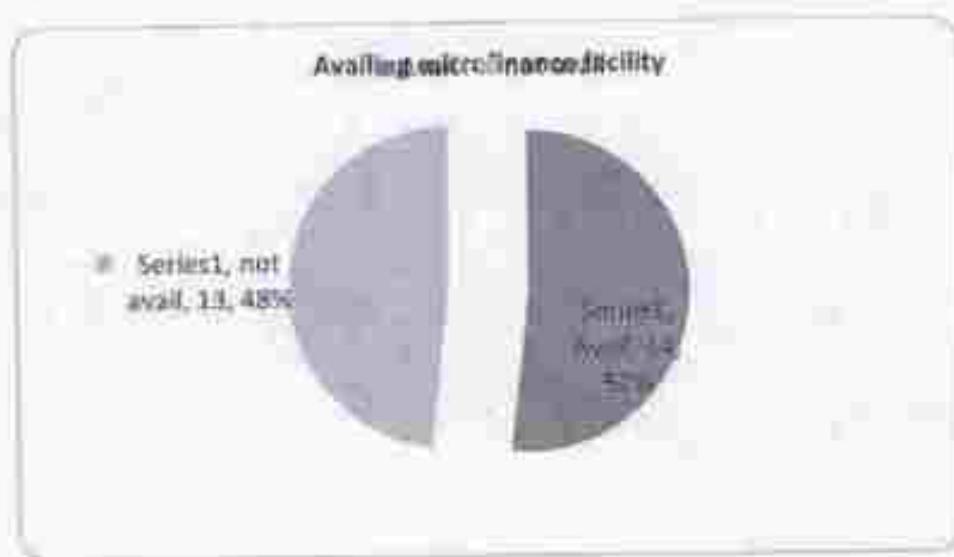

Total number of respondent were 30. Out of 30 population size 3 that is 10% people of Kamrup rural district are not aware of microfinance facility. 90% people of Kamrup rural district are aware about microfinance facility. During the survey people of Kamrup rural district were asked about their knowledge regarding microfinance facility. The reasons behind the poor information about microfinance is microfinance scheme

**2. Sources of Awareness:**

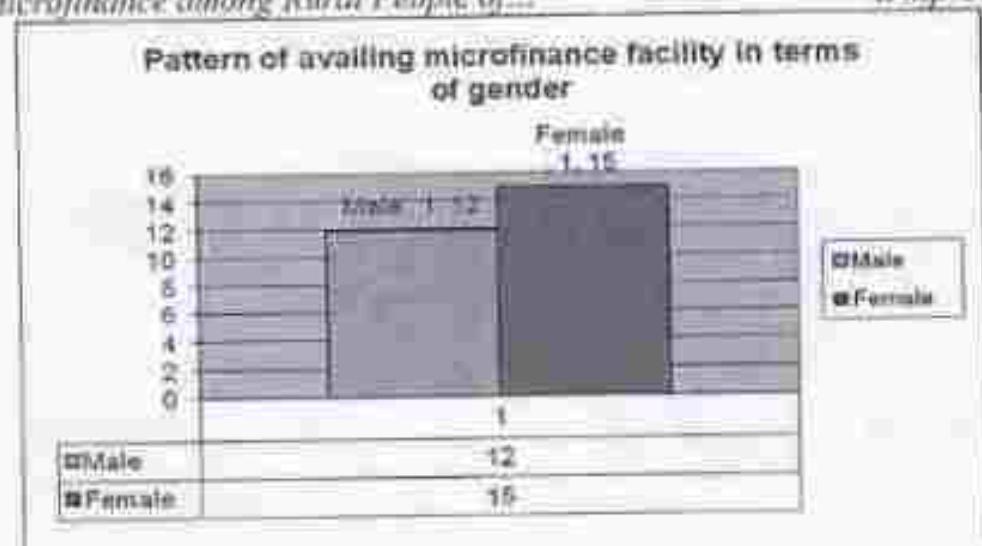

59% of aware people of kamrup rural district know about microfinance from people of their locality, 33% from agent of microfinance scheme and only 8% people of kamrup rural district come to know about microfinance from media.

**3. Availing the Microfainance facility**

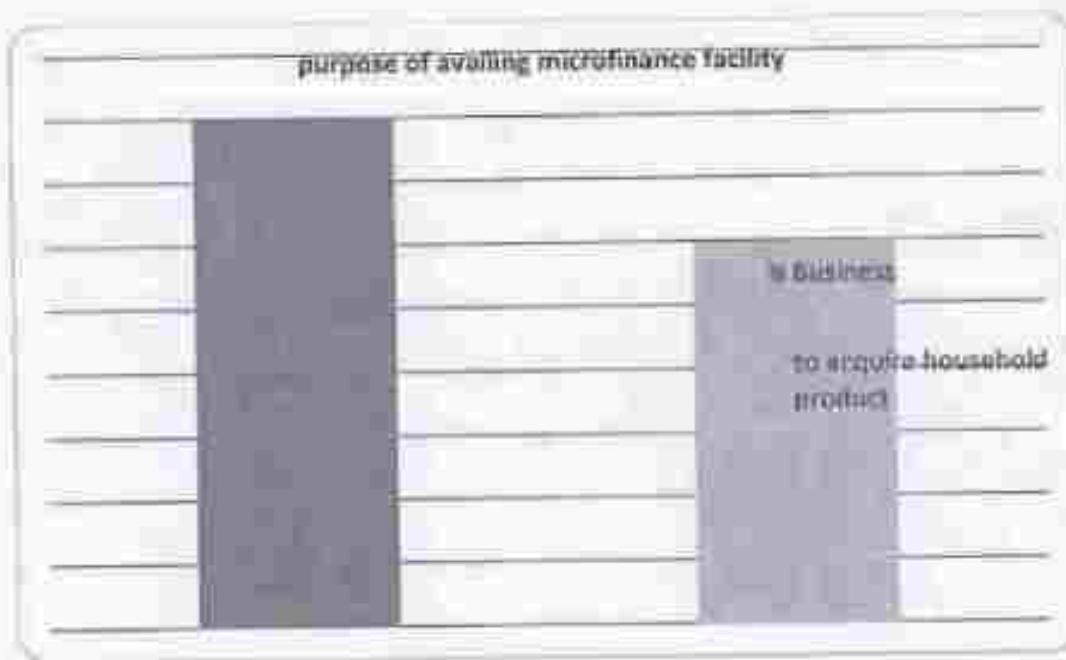

52% of that aware people avail microfinance facility but 48% do not avail microfinance facility. During the time of investigation it was asked why they are not availing that facility then most of them replied that loan amount is very less and they have to return it weekly basis. So it is not possible for them that in every week they would go and spend so much time for return of the loan primum.

**4. Pattern of Availing microfinance facility :**

Most of the female of the rural people of Kamrup rural district avail microfinance facility to do small enterprise. Some of them are availing this facility to help their companion in their business.

### 5. Purpose of availing microfinance facility:

Most of the people of Kamrup rural district are availing microfinance facility for business purpose others are for purchase of household product.  
Purchase

#### **Findings:**

1. Most of the rural people are aware about microfinance scheme. Only 10% of sample size are not aware microfinance scheme.

2. People of Kamrup rural district come to know about microfinance from people of their locality, agent and through media.
3. Most of the rural people of Kamrup rural district are availing the microfinance facility. Others who are not availing, because of microfinance scheme policy and loan amount is very low.
4. Female are availing the microfinance facility more than male people of Kamrup rural district. Some of the female employees are availing this facility for helping their husbands.
5. People are availing microfinance facility mainly for business or to open small business enterprises ( purchase sewing machine, open shop, farming etc) .Others are availing for purchase of household product.
6. Some of the rural people of Kamrup rural district thinks that what microfinance organization are doing here only for getting profit from rural people. So they are not interested to avail that facility and they also recommend others not to avail microfinance facility.
7. People of Kamrup rural district don't know about microfinance scheme's objective and mission that is rural development.
8. Most of the rural people of Kamrup rural district prefer informal microfinance saving societies. According to respondent informal saving societies are easily available.
9. Interest rate is high according to respondent so that some rural people are not availing the microfinance loan facility.

**Recommendation:**

1. Microfinance should be accessible for the microfinance seekers which would lead to the growth of micro and small business enterprises.
2. It is suggested that the awareness programs should be conducted in rural areas so that perception of rural people towards microfinance is changed. It is suggested that the awareness programs should be conducted in each educational institution to explain the benefits of microfinance.
3. It is also suggested that microfinance organization must make such a satisfaction so that it become trustful among people of Kamrup rural district.

**Conclusion:** Microfinance facility is very vital in rural development so people of rural area should aware its significant role in rural development. Proper information about microfinance should clearly intimate among rural people so that they can easily avail the facility which lead to rural development. It is very much important to know the ways and means of getting microfinance loans for small business entrepreneurs to improve their standard of life.

Gupta L, Saikia CM, Sharma A, Ahluwalia SK, Vermani M, Konwar D, Vijayaraghavan P 2019 – *Myristica fragrans* extract inhibits melanin biosynthesis, hyphal growth and appressorium formation in *Magnaporthe oryzae*. Current Research in Environmental & Applied Mycology (Journal of Fungal Biology) 9(1), 255–270. DOI: 10.5943/cream/9/1/22

### Abstract

*Magnaporthe oryzae* causes rice blast disease, affecting 30% of annual rice production globally. It produces specialized infection structures called appressoria, allowing the pathogen to penetrate the underlying tissue. A dense layer of melanin in the appressorium wall generates turgor pressure to form invasive hyphae. *Myristica fragrans* has potent antimicrobial activity. Therefore, the present study was envisaged to explore the effect of *M. fragrans* extract on inhibition of melanin biosynthesis, hyphal growth and appressorium formation in *M. oryzae*. The results demonstrated that minimum inhibitory concentration (MIC<sub>10</sub> and MIC<sub>50</sub>) of *M. fragrans* n-hexane extract (PE-01) were 0.625 mg/mL and 0.312 mg/mL, respectively. Melanin biosynthesis was reduced up to 66.66% at 0.312 mg/mL concentration. Microscopic analysis revealed distorted conidia with no appressorium formation. qRT-PCR showed four-fold upregulation of *ahl1/pkzP* gene in presence of PE-01 extract as compared to control which may be due to generation of stress. PE-01 treated rice seeds showed 85% suppression of rice blast and 40% enhancement of plant growth. Thus, *M. fragrans* extract has the potential to be developed as a biopesticide against *M. oryzae* infections in rice.

**Keywords** – DHN-melanin inhibition – biopesticide – rice blast – SEM – tricyclazole

### Introduction

Various pathogens like *Magnaporthe oryzae*, *Rhizoctonia solani*, *Xanthomonas oryzae* cause significant yield loss of rice crop in South and South-East Asia including India (Sireesha 2013). Of these, rice blast caused by *M. oryzae*, is a serious and recurrent problem in all rice-growing regions of the world (Kapoor & Katoch 2014). The constraints imposed by rice blast include reduced yield, storage rot and fungicide costs.

*Magnaporthe oryzae* is a heterothallic ascomycete, which produces asexual or sexual spores (ascospores) in structures called ascii (Couch & Kohn 2002). It infects rice plants at all developmental stages and can cause blast symptoms in leaf, collar, neck, and panicle (Chandha & Gopalakrishna 2006). It produces a specialized infection structure called appressoria to penetrate the leaves and stems of the rice plant, allowing the pathogen to enter the underlying tissue. *M. oryzae* forms an appressorium on the plant tissue surface by a mechanism involving recognition of

# A Study on Empowerment of Higher Secondary Girl Students in relation to Religion, Locality and Family Types

**Dr. Prativa Patowary**

Associate Professor  
Department of Education  
Gorakhat College, Assam

## Abstract

To find out the empowerment of higher secondary girl students, the investigator relates it with the variables like religion, locality and family types. The descriptive survey method has been applied for the present study and 200 adolescent girls are selected as sample by using random sampling technique. Adolescent Girls' Empowerment Scale (2009) standardized by Dr. Devendra Singh Soodha and Dr. Alpana Singh was used to measure the empowerment of adolescent girls. Percentage analysis and t-test have been applied to analyze the objectives. Major findings of this study are: (i) Majority of higher secondary girl students have high level of empowerment; (ii) Hindu and Muslim higher secondary girl students differ significantly regarding empowerment; (iii) There is no significant difference in mean scores of Urban and Rural higher secondary girl students regarding empowerment; and (iv) There is no significant difference between higher secondary girl students belonging to Joint and Nuclear family regarding empowerment.

**Key Terms:** Empowerment, Higher Secondary Girl Student, Religion, Locality, Family Types

## Introduction

"There is no chance for the welfare of the world unless the condition of women is improved. It is not possible fly on only one wing". This opinion propounded by Swami Vivekananda clearly shows on the importance of women for the welfare of the society. But in practical, they are proverbially said to be the "weaker sex" in all directions—physical, mental and spiritual compared to their male counterpart members in society. Hence, in 21<sup>st</sup> century, our major socio-educational issue is empowerment of women folk of any society.

The word "empowerment" literally means strength. This empowerment word is used in various fields like social, cultural, political, economic, educational etc. In case of women, empowerment means empowering women from all sides. Empowerment means moving from a weak position to execute a power. It is the ability to direct and control one's life. It is a process in which women gain control over their own lives of knowing and claiming their rights at all levels of society at the international, local and household levels. It means extending choices—choices about if and when to marry, choices about education, employment opportunities, controlling the social and physical environment, choice about if and when to get pregnant and ultimately about family size. In promoting a woman's empowerment, Tronto (1995) gives five levels which include welfare, access, consciousness, participation and control.

Adolescence is the most crucial stage of human development. In this stage, drastic changes are faced by both boys and girls. Both boys and girls are important for the progress of nation in general and in particular, apart from that, adolescent girls are very important section of any society as they are potential mothers and future lawmakers. Hence, empowerment of adolescent girls is very essential.

## Literature Review

Kaur, Anurdeep (2017) conducted a study on empowerment of adolescent girls in relation to their school environment. The major findings reveal no significant relationship between Empowerment and School Environment of Rural and Urban Adolescent girls, also no significant difference was found between the Empowerment level of Rural and Urban Adolescent girls.

Nisha Pandey and Juhra Khemraj (2018) conducted a study on empowerment of adolescents' girls of Chhattisgarh in relation to type of school. Adolescent Girls' Empowerment Scale (AGES) constructed by Sandhu and Singh (2009) was used in this study. Results reveal that the adolescent girls from private schools were found to be significantly more empowered as compared to adolescent girls from government schools.

Nisha Pandey and Juhra Khemraj (2018) again studied empowerment of adolescent girls in relation to parental support. Result reveals significant association between adolescent girls' empowerment with the parent support they receive. It was concluded that parent support boost up the empowerment in adolescent girls.

Sukha Dima (2019) undertakes a study to find out the secondary level urban and rural adolescent girls awareness level on women empowerment. The findings of the study reveals that rural adolescent girls are less empowered than urban adolescent girls and there is a significant difference between rural and urban adolescent girls' awareness level.

## Need of the Study

Article 15 (1) of Indian Constitution clearly prohibited the discrimination on grounds of religion, race, caste, sex or place of birth. The Constitution of India highlighted focus on equal status of man and woman in the society without any discrimination. But in real sense, the status and position of women in the society is not remarkable. The present study comes in the wake of immeasurable gender-focused interventions implemented since long in our country. The Indian girls because of their secondary status in the society may have low self-esteem and poor psychological well-being. The problem of neglecting of adolescent girl child is a global phenomenon. Although, there has been development in many fields but the development of women and their rights is always overlooked. The crime and violence are increasing day by day. A girl is not even safe at her own house and with her near ones. It is really surprising that this is a emerging topic to be discussed everywhere but with no real solution. This put a tremendous burden on programmes for development of women and children and hampers the process of empowering women.

Government has initiated different programmes for the welfare of women in general and adolescent girls in particular. For instance, facilities for educational loans, free of cost cycles to scheduled castes girls and Rajiv Gandhi Scheme for Empowerment of Adolescent Girls (RGSEAG) - SABLA, Kishori Shakti Yojna and many other, with the objectives to empower and strengthen women and girls. It is hence necessary to study women's empowerment from the perspective of women's socio-economic characteristics, as women are divided by heterogeneous categories based on class, life cycle, or ethnicity. Different studies are already conducted on the issue of women empowerment. Though, the investigator does not claim for the originality of research problem but there is a research gap as only few studies are conducted in Assam and especially in Kamrup and Kamrup (M) districts of Assam.

## Statement of the Problem and Operational Definition of Key Terms

The problem of this paper is stated as given below: "A Study on Empowerment of Higher Secondary Girl Students in relation to Religion, Locality and Family Types". Operational definitions of the key terms used in this study are mentioned below:

- \* **Empowerment:** By 'Empowerment', the investigator meant the level of power and entitlement, autonomy and self-reliance, decision making, participation, capacity building, social, political and legal awareness and exposure to information media as perceived by the adolescent girls.
- \* **Higher Secondary Girl Student:** By 'Higher Secondary Girl Student', the investigator meant the girl students studying in Standards XI and XII in Higher Secondary Schools and Degree Colleges of Kamrup and Kamrup (Metro) Districts.
- \* **Religion:** By 'Religion', the investigator meant Hindu and Muslim as the sample only consists of these two groups only.
- \* **Locality:** By 'Locality', the investigator meant Rural and Urban area.
- \* **Family Types:** By 'Family Types', the investigator meant Joint family and Nuclear family. Joint family normally consists of members who at least belong to three generations- husband and wife, their married and unmarried children and their married as well as unmarried grandchildren. Again a nuclear family is one which consists of the husband, wife and their children.

## Objectives of the Study

Main objectives of this present study are;

1. To find out the empowerment level of higher secondary girl students.
2. To compare the empowerment of higher secondary girl students in terms of religion (Hindu and Muslim).
3. To compare the empowerment of higher secondary girl students in terms of locality (Rural and Urban).
4. To compare the empowerment of higher secondary girl students in terms of family types (Joint and Nuclear family).

## Hypotheses of the Study

On the basis of above mentioned objectives, following hypotheses are formulated:

- $H_1$ : There exists no significant difference between Hindu and Muslim higher secondary girl students regarding empowerment.
- $H_2$ : There exists no significant difference between Rural and Urban higher secondary girl students regarding empowerment.
- $H_3$ : There exists no significant difference between higher secondary girl students belonging to Joint and Nuclear family regarding empowerment.

## Method and Materials

- \* **Selection of research Method:** The Descriptive Survey Method has been applied for the present study. This method is applied in this study to obtain pertinent and precise information concerning the current status of the phenomena and to draw valid general conclusions from the facts discovered.
- \* **Population and Sample:** All the XI and XII standard girl students studying in Higher Secondary Schools and Degree Colleges of Kamrup and Kamrup (Metro) districts are the population of this present study. Out of these, 200 adolescent girls are selected as sample for this study by using random sampling technique. The sample frame is tabulated below:

Table No.1: Selection of School

Districts	No. of Higher Secondary School	No. of Degree College
Kamrup	2	2
Kamrup (Metro)	2	2
Total	4	4

Table No. 2: Selection of Sample on the grounds of Variables

SL No.	Variables	Sample	
1.	Religion	Hindu	118
		Muslim	82
2.	Locality	Urban	100
		Rural	100
3.	Family Types	Joint Family	77
		Nuclear Family	123

- **Tool for Data Collection:** Adolescent Girls' Empowerment Scale (2009) constructed and standardised by Dr. Devyndra Singh Sisodia and Dr. Alibata Singh was used to measure the empowerment of adolescent girls. This scale consists of 49 items and there are 7 areas in this scale such as Power and Entitlements, Autonomy and Self-Reliance, Decision Making, Participation, Capacity Building, Social, Political and Legal Awareness and Exposure to Information Media. This scale can be administered only on adolescent girls of 13 to 18 years of age. Reliability of this scale is calculated by Test-Retest method and it was found to be 0.71. The scale has high content and constructs validity as expressed by different experts. All the items have to be checked on 3 point scale. For each statements the numerical values 5, 4, 3, 2 and 1 were given for five responses namely Strongly Agree, Agree, Not agree or disagree, Disagree and Strongly Disagree respectively. Total sum of score vary from 49 to 245, showing low empowerment to high.
- **Statistical Technique:** Percentage analysis and t-test have been applied to analyse the objectives.
- **Delimitation of the Study:** This study is confined to the higher secondary girl students (age group 16-18 years) of Kamrup and Kamrup (Metro) districts of Assam.

### Analysis and Interpretation

The collected data are analyse appropriate statistical technique in the following way and interpretation is also done on the basis of analysis.

Table No.3: Percentage of Higher Secondary Girl Students in Different Level of Empowerment

Empowerment Level	Range of Scores	N	%
High	163-245	90	45
Medium	82-162	73	36.5
Low	41-81	37	18.5

From Table no. 3, it is inferred that 45% of higher secondary girl students have high level of empowerment, 36.5% of higher secondary girl students have medium level of empowerment and 18.5% of higher secondary girl students have low level of empowerment.

**Table No.4: Percentage of Higher Secondary Girl Students in Different Level of Empowerment in regards to Religion, Locality and Family types**

Empowerment Level	Range of Scores	Religion				Locality				Family Types			
		Hindu (118)		Muslim (82)		Urban (100)		Rural (100)		Joint (77)		Nuclear (123)	
		N	%	N	%	N	%	N	%	N	%	N	%
High	163-245	56	49.15	32	39.03	50	50.0	40	40.0	32	41.56	56	47.16
Medium	82-162	42	35.69	31	37.80	34	34.0	39	39.0	39	37.66	44	35.77
Low	41-81	18	15.25	19	22.17	16	16.0	21	21.0	16	20.78	21	17.07

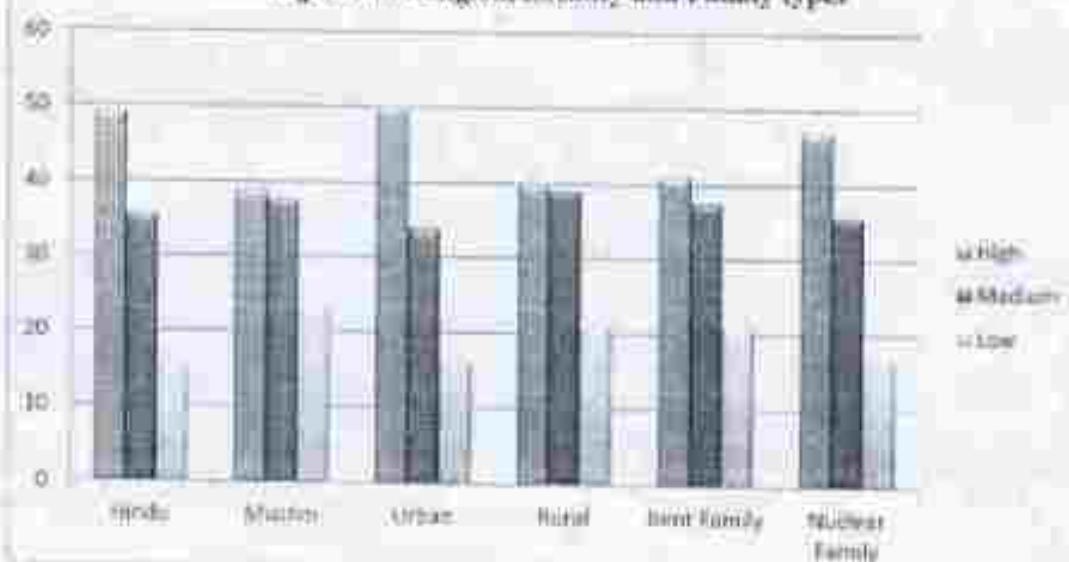

From Table No. 4, it is inferred that regarding religion, 49.15% of Hindu and 39.03% of Muslim higher secondary girl students have high level of empowerment, 35.69% of Hindu and 37.80% of Muslim higher secondary girl students have medium level of empowerment and 15.25% of Hindu and 22.17% of Muslim higher secondary girl students have low level of empowerment.

Again regarding locality, 50% of Urban and 40% of Rural higher secondary girl students have high level of empowerment, 34% of Urban and 39% of Rural higher secondary girl students have medium level of empowerment and 16% of Urban and 21% of Rural higher secondary girl students have low level of empowerment.

Again regarding family types, 41.56% and 47.16% higher secondary girl students belonging to Joint and Nuclear family respectively have high level of empowerment, 37.66% and 35.77% higher secondary girl students belonging to Joint and Nuclear family respectively have medium level of empowerment and 20.78% and 17.07% higher secondary girl students belonging to Joint and Nuclear family respectively have low level of empowerment.

Again the above tabulated values are graphically shown below for better understanding.

**Figure 1: Graphical representation of Percentage of Higher Secondary Girl Students in Different Level of Empowerment in regards to Religion, Locality and Family types**

**Table No. 5: Comparison of Empowerment of Hindu and Muslim Higher Secondary Girl Students**

Variable	N	Mean	SD	t-value	Remarks
Hindu	118	149.85	54.57	1.97	Significant at 0.05 level
Muslim	82	135.31	56.36		

From Table 5, it is clear that the t-value is 1.97 which is significant at 0.05 level of significance. This means that there is a significant difference in mean scores of Hindu and Muslim higher secondary girl students regarding empowerment. Thus the null hypothesis that there exists no significant difference between Hindu and Muslim higher secondary girl students' regarding empowerment is rejected. Further the mean score of Hindu higher secondary girl students' empowerment level (149.85) is significantly higher than Muslim higher secondary girl students (135.31).

**Table No. 6: Comparison of Empowerment of Urban and Rural Higher Secondary Girl Students**

Variable	N	Mean	SD	t-value	Remarks
Urban	100	148.91	53.54	1.29	Not Significant
Rural	100	138.58	55.88		

From Table 6, it is clear that the t-value is 1.29 which is not significant at any level of significance. This means that there is no significant difference in mean scores of Urban and Rural higher secondary girl students regarding empowerment. Thus the null hypothesis that there exists no significant difference between Rural and Urban higher secondary girl students regarding empowerment is accepted. Further the mean score of Urban higher secondary girl students' empowerment level (148.91) is significantly higher than Rural higher secondary girl students (138.58).

**Table No. 7: Comparison of Empowerment of Higher Secondary Girl Students of Joint and Nuclear Family**

Variable	N	Mean	SD	t-value	Remarks
Joint Family	77	140.36	55.52	-0.71	Not Significant
Nuclear Family	123	146.10	54.49		

From Table 7, it is clear that the t-value is -0.71 which is not significant at any level of significance. This means that there is no significant difference between higher secondary girl students belonging to Joint and Nuclear family regarding empowerment. Thus the null hypothesis that there exists no significant difference between higher secondary girl students belonging to Joint and Nuclear family regarding empowerment is accepted. Further the mean of empowerment level score of higher secondary girl students' of nuclear family (146.10) is significantly higher than higher secondary girl students belonging to joint family (140.36).

## Findings and Discussion

Major findings of this study are mentioned below:

- Majority (45%) of higher secondary girl students have high level of empowerment as compared to medium (36.5) and low (18.5) level.
- Regarding religion, Hindu higher secondary girl students have high level of empowerment as compared to Muslim counterparts.

- Regarding locality, urban higher secondary girl students have high level of empowerment as compared to rural counterparts.
- Regarding family type, higher secondary girl students belonging to nuclear have high level of empowerment as compared to joint family counterparts.
- Hindu and Muslim higher secondary girl students' differ significantly regarding empowerment.
- There is no significant difference in mean scores of Urban and Rural higher secondary girl students regarding empowerment.
- There is no significant difference between higher secondary girl students belonging to Joint and Nuclear family regarding empowerment.

In this study it is found that urban higher secondary girls are more empowered than their rural counterparts. Reasons for higher empowerment of higher secondary urban girls could be less conservative family environment, importance of gender equality, education of the parents etc.

The results found in this study reveals that religion (Hindu and Muslim) is a contributory factor for empowerment of adolescent girls in the aspects of power and entitlement, autonomy and self-reliance, decision making, participation, capacity building, social, political and legal awareness and exposure to information media. The present finding of objective no. 2 is in agreement with the finding of Suguna (2011).

In this study locality (urban and rural) and Types of family (Joint and nuclear family) are not contributory factor for empowerment of adolescent girls. Urban and rural higher secondary girls are not differ significantly and this finding of objective no. 3 is in agreement with the finding of Amardeep Kaur (2017). Again empowerment levels of higher secondary girl students are not differ from their family types like joint family and nuclear family. The present finding of objective no. 4 is in agreement with the finding of Madhulika Gautam (2019).

## Conclusion

To conclude, it is saying that without proper empowerment of adolescent girls, progress of a nation is not possible. Hence, proper measures should be adopted to increase the empowerment level of adolescent girls. In this regard, the teacher should make new strategies to develop empowerment among adolescent girls which is helpful for increasing empowerment of adolescent girls. Parents also perform their duties towards their children properly. The dealing of parents with their children should be co-operative and friendly. In such an environment, the children will maintain their good and sound health, and empowerment of adolescents also increases in such an environment. Hence a lot of opportunities should be provided in the curriculum to the girl students so that they can develop themselves fully. This type of study aspires to change the mental set-up of the people towards adolescent girls.

### ABSTRACT

Empowerment of women can define to strengthen women's sense of personality and competency to determine physical changes, right to witness communal evolution/progress for them. What's more, women have sufficient opportunities and the future is immediate strategic choices at all areas of their lives. In the contemporary era, the concept of women's empowerment has expanded more and more importance. All types of empowerment- social, political, economic, cultural, legal, ethical, religious, and even spiritual allowed to women with the sympathetic and the enlightened Buddha. Buddhism accommodated equal status to women with men. In Buddhism, the concept of empowerment per se in the process that a woman who wants to empower herself should not only understand her potential and future personality but must put in efforts to achieve her goals. The main purpose of Buddhism is to eliminate suffering. The inequality of women is a form of suffering. Therefore, Buddhists cannot be against feminism to oppose the suffering of all sentient beings. The present study tries to discuss about the Buddhist perspectives on empowerment of women and real situation of women in Buddhism.

### INTRODUCTION

In past few centuries, women have been challenging with men in the entire nation. We can find that women have decided to place such as ruler of the state. For instance Germany, Nepal, and many other countries. There has been a sense of equality in both men and women. This shows us how things have been changing in the contemporary time. This will give the same opportunities to both men and women. The country can also develop very fast if everyone gets good opportunities. Both men and women well thought-out the two wheels of a cart. If one wheel is smaller than the other is, the movement will definitely be impaired. This paper is an attempt to study the aspect of empowerment of women as depicted in Buddhism. According to Dhamma Pada, the traditional view of women in early Buddhist text that they were inferior. For Buddhists the Four Noble Truths are "the truths of the Noble Ones", the truths or realities for the spiritually worthy ones. These truths are suffering, the cause of suffering, the cessation of suffering, and the path leading to renunciation of suffering and cessation of suffering. The truths are understood as the realization both men and women that led to the enlightenment of the Buddha. Buddhism advocated the Dharma promotes the realization of all negative attitudes and false views are eradicated at the pristine and nonconceptual core.

Buddhism accepts as true that emancipation or the enlightenment and the independence from the succession of rebirth. Buddhism advocates that there are no diversity both men and women. Both are subject to old age, sickness, death, desire and suffering. For Buddhists women have the expectation forthcoming as men to achieve the wisdom, insight and compassion necessary for enlightenment. Buddha was the first religious teacher who gave women equal and unimpeded opportunities in the field of spiritual enlargement. He truly paved the way for women to lead a full religious life. He was not a reformer but he admitted women into the monastic order. Both the Mahayana and the Theravada traditions mention women who have attained enlightenment. In Buddhism mainly, monks called bhikkus and nuns are called bhikkuni. Both aim for the goal of liberation from samsara. In Buddhism, there have always been women in the sangha. Kāśyapa, Kāshyapa, Mañjuśrī Uccaiśravas are two female spiritual teachers. They suggest that there have always been women in the sangha and that women have always followed the Dharma. Buddha holds that both the men and women, as equals, able to understand and practice the Dharma and both capable of achieving enlightenment. Buddha recognized the political right of women to join the sangha. He liberalized the sangha to recognize women's right to be leaders. Against the dominant Hindu view, Buddha held that women could develop her own personality and individuality independent of any male support. He was the first to recognize the need for women's education and political initiative. In Buddhism, both buddhist

and wife expected to share equal responsibility and discharge their duties with initial dedication. The husband is deserved to consider the wife's friend, a companion, a partner. Buddha gave emphasis to the dominant position a woman can play and should play as a wife is superior mother in making the family for a achievement. This shows that in the Buddhist society the wife occupied an equal position with the husband.

## CONCLUSION

Buddhist feminism is acts of moving that try to find build up the religious, legal and social status of women within Buddhism. The current amendment about the status of women in the Buddhist time brings a contemporary significance. It advocate the right path to eliminate ignorance and weakness in the midst of women. The right path is that of empowerment. Empowerment brings enlightenment. Empowerment of women means empowerment of the entire mankind as in the current time. In conclusion, we may say that women are at the center of the world inside home and hold the centre of the household exercise own residence. It is across the world accepting that similar to all human beings, women too have a right to liberty from desire, liberty from terror and liberty to be above in dignity like their male equivalents do, all over the human kind.

### How to cite this article:

Niraj Modi (2022) 'The Status and Empowerment of Women With Reference To Buddhist Moral Principles', *International Journal of Current Advanced Research*, 11(05), pp.384-385. DOI: <http://dx.doi.org/10.24327/ijcar.2022.385.0201>

The empowerment of women is one of the answers to the manifestations of discrimination, subordination and marginalization that women face in the world. Buddhism provides importance to goodness and recognizes equal opportunity of civilization with discipline that everyone can achieve the uppermost position following regulation and be an embodiment of the strength of mind. It entails that not only men but women also attain Nibbana.

## IN SOCIAL CONTEXT OF BUDDHIST ETHICS

NIHARA MEDISH

RESEARCH SCHOLAR NEHU, SHILAJAYA, SIKKIM

### ABSTRACT

Social responsibility means that individuals and companies have a duty to act in the best interests of their environment and society as a whole. Everyone should make for the society working for the social, cultural and ecological causes. Social responsibility different types such as Ecological Responsibility, Ethical Responsibility, Financial Responsibility, Organizational Responsibility etc. Buddhism teaches that all people have the status of individuals. As an individual, one person is obliged to take responsibility for his or her own actions. All people are conducting their lives under the control and supervision of the law of Karma. The concept of social equality and social justice helped Buddhism to cross the boundaries of Indian sub-continent and became a world religion. Human beings are social beings that each one of us lives in a condition of interdependence within society. The social responsibility of Buddhism is merged in human rights, nonviolence and justice. The major focus of my research paper places social responsibility at Buddhist ethics and discussion of human rights, living kindness, nonviolence, reconciliation as well as the art of returning from killing any beings.

**KEYWORDS:** Society, Ethics, Buddhism, Human rights, living kindness, nonviolence

### 1. INTRODUCTION

Buddhism is one of the worldwide foremost religious convictions, and makes 2,500 years ago in India. Buddha taught about that the human life is full of suffering, and that understanding, discern and corporeal labour, and expert contacts are the ways to accomplish illustrations or services. Buddha well thought out an ordinary being that is enlightened. The path to enlightenment accomplished through: simple moral practices, contemplation as well as great judgment. Buddhism holds up by individuals to make a complete self-independent. The most significant teachings of Buddhism the Four Noble Truths that is fundamental to accepting the religious conviction. Buddhism holds the example of Karma and rebirth. Buddha taught his supporters that existence of distract as expressed in the Fourth Noble Truths, could attained through the Eightfold Path. The Eightfold Path of Buddhism trains the principles for moral behavior, psychological insight as well as cultures known India. Buddhism comes across in the human beings and with other people respectively. In this sense, Buddhism accepts in the that human beings are in control of accepted commandment that has well-mannered be issued while. Buddhism involves that all human have aspiration to get rid of suffering for his or her individual actions. Buddhists admitted that for achievement of discrimination and break their unwholesome there is an ethical and spiritual path understand as Noble Eight-fold-path.

The Eightfold Path grouped into three sections: Wisdom (prajna), Moral virtue and Concentration (samadhi). All the three sections have three characteristics. All of them considerations moving hold up one another. For example, wisdom is purifying through morality, and morality is purifying through wisdom. The wisdom or wisdom includes right view, understanding (anumodha), right intention or aspiration (sammappatti). The morality section contains right speech (satya vach), right action (karma satmatma) and right livelihood (sammata). Upon the last section of the Eightfold Path has three components: right effort (samskara), right mindfulness (vishaya viksa) and right concentration (bhavana samadhi). Buddha's philosophy furnished influence in upper-class segment every part of the distinctive services as well as all his application very Buddhistic in a sense that it is a collection of respect and standards. It meant for the encouragement of understanding and harmonizing their community involvement. The good roles of the Buddha now and then shaped toward side up in the subsequent stages of the Discipleship. "Not to do any evil (Papam) by advancing the good (Ghatita); by purity, with total fervor, in the teaching of the Buddha."

## IN SOCIAL CONTEXT OF BUDDHIST ETHICS

The main objective of Buddhist ethics is an amendment of a human's conduct. Buddha's moral tenets highly developed a spiritual or art of equanimous definitive ignorance. For Buddha, all human beings undertake to fulfil destructive material extraction of material of nature, explicitly great, latent and dubious alloy that right accomplishment achieves. Buddhist moral principles be associated with a applicable treatment for the differences. Human beings to realize difference between what is morally (right) or wrong (bad). Buddhist moral principles come along its understanding not on the varying situations but according how applies on the strict understandings of moral world. Buddhist ethics principles are fundamentally a function of nature, and the functioning rule of cause and effect. Buddhist ethics interested in social commitment constructs its main behavioral composition practice and relevant to the contemporary situation.

The principles regulations of Buddhism based on character traits: selflessness, selflessness, and straightforwardness and be in continuation of the excess of discernment. It put down unnecessary prominence on culture, importance with personalities. Buddhism will informed but no harm and the improvement of sympathy with devoted benevolence. For Buddhists pacification is a way of life which born of the combination of spiritual insight as well as practical action. Buddhism identified that individual and world society associated through scriptural wisdom and dealing of all human being. Buddhism advances the sympathy and loving-kindness the subgrowth of practice are the cheering up antecedent and continue daily. Unselfish important way away from, responsibility, and strength of will is amplified with one understanding wisdom. The observed of Buddhism can be relevant in the same way to family unit, neighborhood life and countrywide engagement for continual revolutionize.

A human being desires for his or her happiness, gain and progress. Loving-kindness means active interest in others. In sanskrit loving-kindness means *maitri*, and in Pali words, *Buddha* has admitted *maitri* as the first of the four sublime states. Buddhist virtues and one of the ten paramis of the Theravada school of Buddhism. It is a well-known outward appearance of Buddhist deliberation. The concept of loving-kindness *maitri* discussed in the Metta Sutta or *Buddha*. It also discussed in ancient and medieval texts of Hinduism and Buddhism. The word *maitri* means friendly, amicable, benevolent, affectionate, kind, good will, love, amity, sympathy to others. In Buddhist texts, it is an important practice. Buddhism admitted that by *maitri* eliminates grosses to depressing situation of psyche.

In Pali contexts, in Buddhist tradition said that there are a number of profits from the applying of *maitri*. The application of *maitri* for the behavior of psychopath and other healthcare interconnected obligations is the subject of present research. In this research paper also focuses on diagnosis, communal ideals, communication toward all beings. Loving-kindness represents a most important technique of principles and practices to the construction of pleasant-sounding association with civilization. The practice of loving-kindness towards the friendly and the indifferent is not difficult. Their observational towards one's aggressive needs much more endeavor. One who established in practice can practice loving-kindness to both friends and foe alike. Justifying the benefits of loving-kindness and the causes of the India ones who had practiced it correctly also would be helpful in this regard. If all practice this noble virtue of loving-kindness, this world would be a very much happier place. Many people forced to live in hiding the fear of their lives.

They are refused practice of loving-kindness and devoid of "other pain" or others, not their partly corrupt possessives, kill and eat their flesh and so on. If everyone endowed with loving-kindness, the universal problem of defense would be solved and bringing infinite relief as well as care to the society. In the Anguttara Nikaya enunciates the benefits accruing from the practice of the absorption of loving-kindness. If an individual practice the loving-kindness he or she alone happy. All of the wakes up happily. In addition, he or she don't get see unpleasant dreams. There are so many people how are sleep happily. They are wake up friendly and amicably, yawning and murmuring. This is an unpleasant experience for them. If a person practicing loving-kindness rises up from sleep (apply like a blossoming lotus without any disorder). Therefore, human beings should social responsible to others. Buddha has admitted that when a person practices loving-kindness he or she should be free from hatred.

## 2. CONCLUSION

The main aim of Buddhist ethics, the teaching of the Buddha, is the annihilation of suffering. A focal point is how human beings can accomplish salvation by eliminating the roots of difficulty of life. Buddhist ethics can utilized in the society of persons. The Five Precepts exemplified the first elementary moralities progression. In this paper, we have established that Buddhist tends to focus to avoid transgressions by way of and reducing the traits of individual substances: the indispensable qualities of mother, daughter, anguish, illness, and poverty.

## IN SOCIAL CONTEXT OF BUDDHIST ETHICS

way. This article attempts to be aware of myself & my all at the composition of society as resource used in other individual education. ## A STUDY ON THE VALUE PATTERN OF COLLEGE STUDENTS WITH SPECIAL REFERENCE TO BAKSA DISTRICT (BTAD) OF ASSAM.

**Dr. Prativa Patowary**

Associate Professor, Dept. of Education, Gorakswar College, Assam

### **ABSTRACT**

Values are evolved in social structures slowly through an interaction among the members of the society. Every social group develops their own value system according to their ecological, social, political, economic and religious environment. But with the change of time and socio-political needs changes and accordingly values also keep on changing. The society give up unimportant values and develops new values to cope with the new situations of life. A child receive education from many sources, mainly in a formal way from the educational institutions and in an informal way from family, friends, neighborhood and society. Here in this study an attempt has been made to understand the value pattern of the present generation, mainly the college students of Baksa district of BTAD area of Assam.

**Key words :** Value Pattern, BTAD area.

### **Introduction**

Values stands for ideals men live for. According to Cambridge English Dictionary, value means the principles that help one to decide what is right and wrong and how to act in various situations. Again, according to the Webster's dictionary, "Value Pattern is the set of principle whereby conduct is directed and regulated as guide for individual or social group". Values are evolved in social structures slowly through an interaction among the members of the society. Every social group develops their own value system according to their ecological, social, political, economic and religious environment. The social life proceeds on the assumption that the values established in the groups are the ones that must be respected and enforced. With this end in view, every society has developed an educational system to operate within its socio-economic and political system, because education is one of the potent factors most likely to influence and modify one's behaviour. But with the change of time and socio-political needs changes and accordingly values also keep on changing. The society give up unimportant values and develops new values to cope with the new situations of life. In this process of learning new value and unlearning the old one education plays a very important role. Education is the only agent to transferring the already existing values from one generation to other and to developing new ones. A child receive education from many sources, mainly in a formal way from the educational institutions and in an informal way from family, friends, neighborhood and society. Here in this study an attempt has been made to understand the value pattern of the present generation, mainly the college students of Baksa district of Assam.

### **Review of related literature**

Bumun, Kaotom (1992) made a study of the values of college students of Nagaland in relation to their self-concept. The study revealed that there was significant difference between tribal and non-tribal students in respect of religion, social, aesthetic and democratic values.

Islam, Sirajul (2002) conducted a study entitled, "A study of value pattern of college students in relation to some selected socio-educational variables" in Assam. The result shows colleges in which the student is studying and the media exposure of the student plays an important role in fostering values. Apart from that there are differences in value preference according to sex, religion, and the academic stream.

**ANALYSIS OF VALUE PATTERN IN COLLEGE STUDENTS WITH SPECIAL REFERENCE TO BAKSA DISTRICT OF BTAD  
ASSAM**

Kumar, Meena I. (2004) had undertaken research on the students of professional degree and studied the moral values in relation to certain variables. The sample of the study included 1000 undergraduate students from different academic streams. The result shows that there are some basic differences in value performance according to their academic stream.

Choudhury, Chetan Kumar, R. (2018) studied value pattern of college students under different academic streams. He found from the study that there is no difference in value pattern of different academic streams. Out of 600 sample students all scored highest in moral value and lowest in scientific value.

#### **Objective of the study**

The present study has been designed keeping the following objectives in view-

1. To know about the value pattern of the college students.
2. To make an attempt to compare the nature of value pattern of boys and girls.
3. To understand the influence of educational institutions and academic stream upon the value pattern of its students.

#### **Significance of the study**

Today people all over the world are deeply concerned about the value crisis in every sphere of life. Disregard shown to the basic values like honesty, tolerance, justices and secularism both in personal and public life, has become a matter of great concern. Society looks up to education as vital means to imbibe and foster desirable values among the citizen. Again, if we consider the main function of education is the development of an all-round and well-balanced personality of students, then no one can deny that a proper value pattern is indispensable part of a balance personality. Therefore, development of a proper value pattern is also another great responsibility of education.

India's achievement in higher education in the post-independence period appears to be quite remarkable. Enrollment in higher education across the country rose from less than half million in 1950-51 to over 40 million in 2020. But does it imply a generation with proper value system? Again, the investigator found no study conducted on the value pattern of college students of Baksa district of BTAD of Assam. Therefore, in the present study, an attempt has been made to analyse how successfully our colleges are performing their duties in this regard.

#### **Delimitation of the study**

The present study has included only-

1. The pattern of values of students.
2. There are five (5) Provincialized colleges in Baksa district of BTAD, but only two (02) colleges with Arts and Science stream has been included in the sample.
3. Again, only undergraduate students were included in the sample.

#### **Methodology:**

This study was conducted under descriptive survey method.

#### **Sources of Data**

Data collected in the present study were mainly based on primary sources.

Dr. Pratya Patwary

### Sample

There are total five (5) provincialized colleges in Baksa district of BTAD area. Out of which only two colleges have both Science and Arts stream. The data have been collected from these two colleges. The sample of the study included 240 undergraduate students from two provincialized colleges, 120 students from each college, out of which 60 boys and 60 girl students. Again, the sample is divided into two groups according to their academic stream and 60 students from each stream namely, Science & Arts. The technique of sample selection was Purposive technique. The following table shows the Sample of the study.

Table No 1: Shows the sample of the study

Name of the college	Year of establishment	Science		Arts		Total
		Boys	Girls	Boys	Girls	
Boramti College	1971	30	30	30	30	120
Gorawar College	1972	30	30	30	30	120
	Total	60	60	60	60	240

### Tool

In order to collect the primary data for the study, the investigator used a questionnaire "Study of Value Test" develop and standardized by Dr. R. K. Ojha (Eng. version). The main aim of the questionnaire is to measure the six basic values—Theoretical, Economical, Aesthetic, Social, Political and religious, a classification based on Springer's Type(s) of Man. The questionnaire has two parts—the first part consisted of 30 items with two alternative answers and the second part consisted of 15 items with four alternative answers. In all there are 45 statements with 120 alternative answers. Roughly 20 alternative answers belong to each of the six values. The scale was standardized on 2450 college students in the age range of 17-25 years of age. The internal consistency of the scale was determined by Split-half method.

### Procedure of data collection

The investigator visited the colleges and administer the tool personally to each student.

### Analysis of data

In this present study after tabulation of data, percentage of frequencies was drawn for quantitative analysis.

### Findings

After careful review and analysis of collected data and information, the investigator has found the following facts about the value pattern of college students of Baksa district. Here the result of the study has been placed objective wise.

Objective 1: The value pattern of the college students of Baksa district –

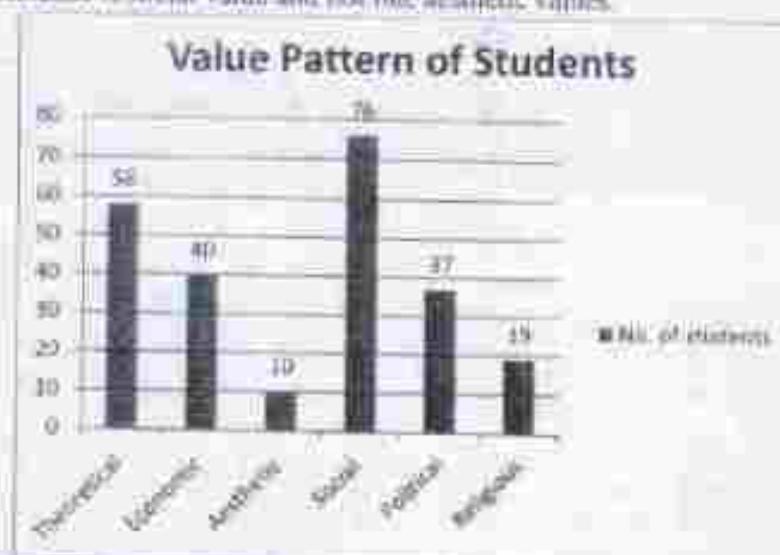

The following table shows the result value preference of students in both the colleges as a whole.  
Table No 2: Value pattern of all student

Values	No of student	%
Theoretical	58	26
Economic	40	18

**A STUDY ON THE VALUE PATTERN OF COLLEGE STUDENTS WITH SPECIAL REFERENCE TO BALKA DISTRICT (JHARKHAND)**

Aesthetic	10	4
Social	36	34
Political	37	17
Religious	19	8
Total	120	100

The above Table reveals that the students of Balka district, are better in economic, social and theoretical values in comparison to political, religious and aesthetic values. Again, it is also evident from the result that their first preference is social value and last one aesthetic values.

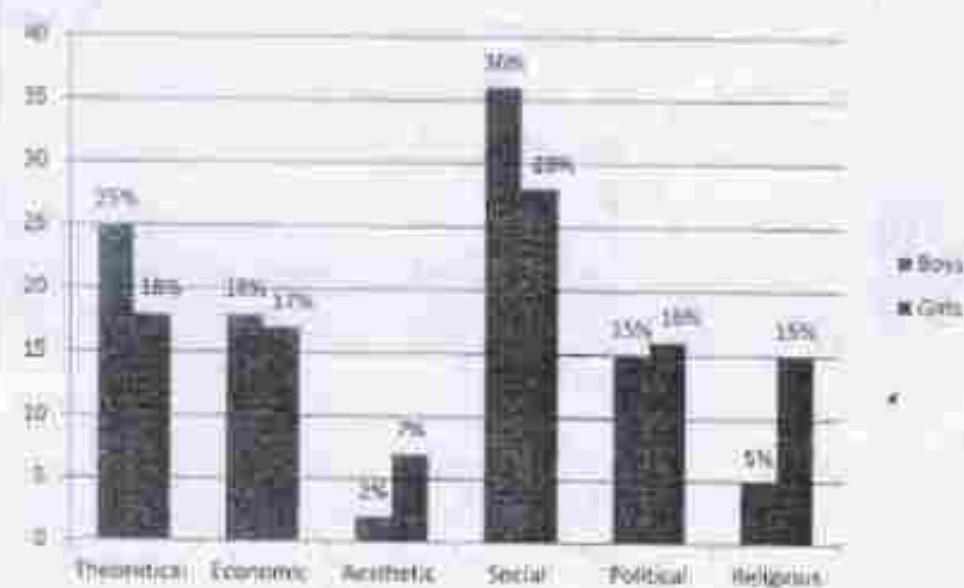

Objective 2: A comparative analysis of the nature of value pattern of boys and girls.  
Table No 3: Result of the comparative analysis of Boys vs. Girls on value pattern

Values	Boys	%	Girls	%
Theoretical	30	25	22	18
Economic	21	18	20	17
Aesthetic	02	2	08	7
Social	43	36	33	28
Political	18	15	19	16
Religious	06	5	18	15
Total	120	100	120	100

The above table shows that there are differences in preferences of values between the boys and girls. It is found that boys are better in theoretical, social and political values in

comparison to girls. Girls on the other hand are good at economic, aesthetic and religious values in comparison to boys.

#### Comparative analysis of Boys vs. Girls on value pattern

**Objective 3. Influence of educational institutions and academic stream upon the value pattern of its students.**

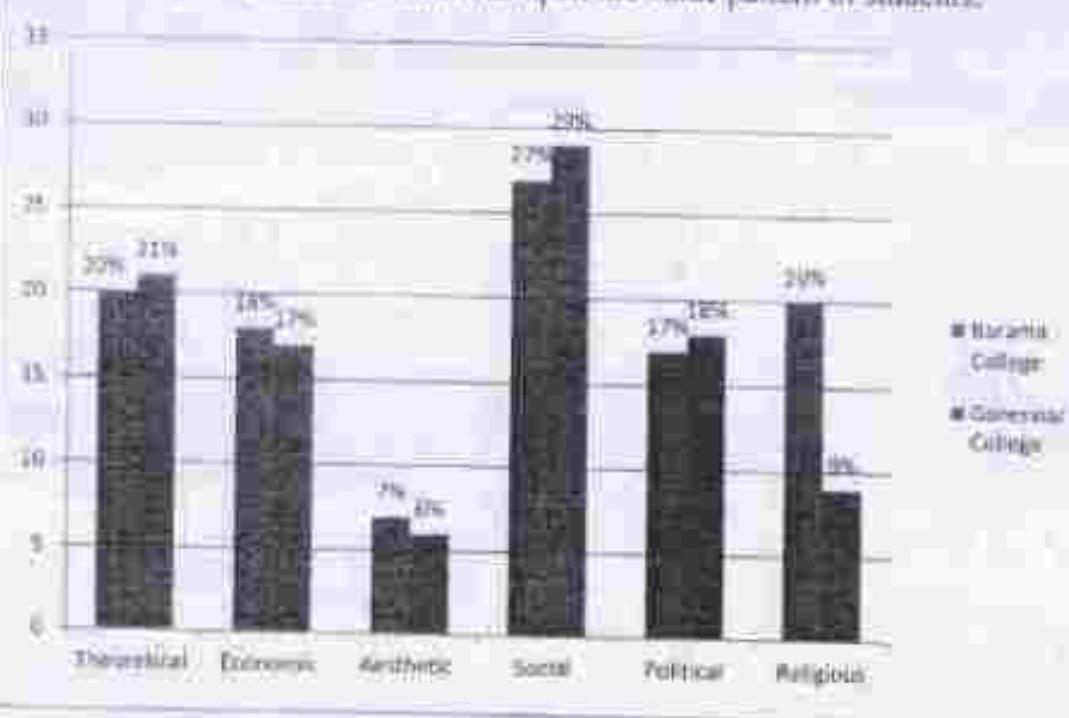

Table No.4 Shows the influence of educational institutions upon the value pattern of students.

Values	Banmra College	%	Goreswar College	%
Theoretical	24	20	25	21
Economic	21	18	20	17
Aesthetic	08	7	07	6
Social	32	27	35	29
Political	20	17	22	18
Religious	15	20	11	9
Total	120	100	120	100

The above table reveals that there is very less difference in value preference if we look into the sample institution wise.

Again, the result of the analysis of the influence of academic stream upon the value pattern of students is shown in the following table:

**Influence of educational institutions upon the value pattern of students.**

**Table No5:** Shows influence of academic stream.

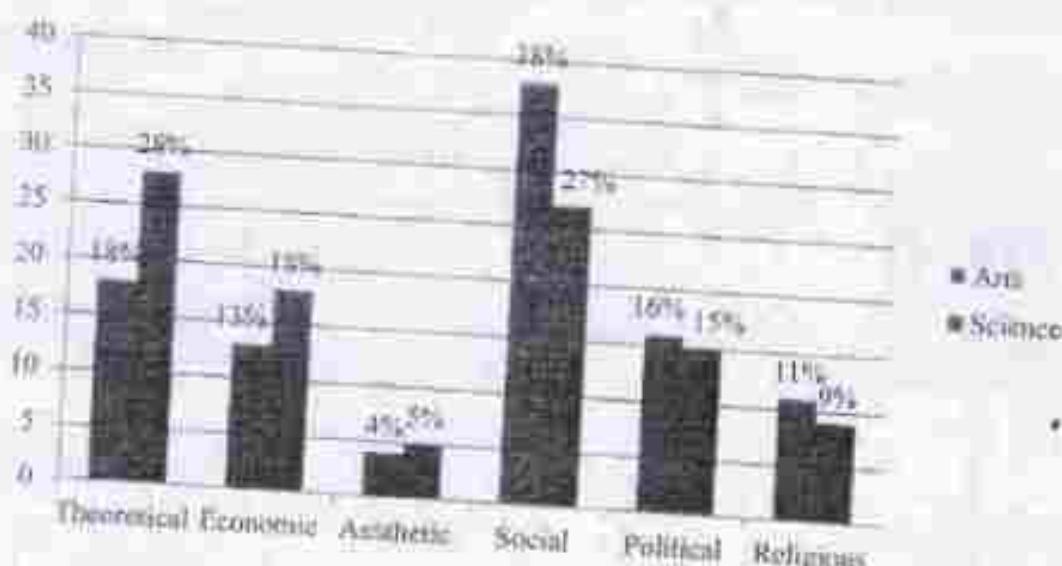

Values	Arts	Science	%
Theoretical	21	18	28
Economic	17	21	18
Aesthetic	9	9	5
Social	39	29	27
Political	19	18	15
Religious	15	13	9
Total	120	120	100

The result reveals that the academic stream has influence upon the development of values. The students of different academic streams have shown different value preferences.

Students of science stream are better in theoretical value but they are not as good in social and political values as the students of other streams.

Again, students of arts stream are good in social, political and religious values but in theoretical and economic values they are not as good as the students of science stream.

### influence of academic stream

#### Conclusion

A comparative study of value patterns of students of provincialized colleges of Balasore district of BTAD areas of Assam has revealed the facts that girls are more conscious of importance of values like, religious, aesthetic and economic values than the boys who are better in values related to social, theoretical and political areas. By and large, the students of both the colleges have shown a general preference to theoretical, social, economic and political values while they are lagging behind in aesthetic and religious values. Since it is shown that the students are aware of certain values, it is evident that the grim picture of total value degradation as presumed in the beginning of the study is not a completely correct picture. It is heartening to see the consciousness of students towards some values in a society which is taking rapid strides in the material front. Yet, at the same time the lack of existence of aesthetic and religious values is a strong determinant of value erosion which can be a matter of concern for the mental and spiritual well being of the coming generations.

This is an alarming manner which requires indepth study and analysis. Thus, it can be concluded that though there are existence certain values among the students, the non-existence of certain others should be recognised as an important factor determining the integrity of society as a whole.

## A Study on Social Freedom of Women in relation to Demographic Variables of Goreswar Area of Baksa District, Assam

Dr. Prativa Patowary

Associate Professor

Department of Education

Goreswar College, Assam

### Abstract:

Social freedom is an important parameter for empowerment of women. As social freedom is very essential for development of women, so the investigator tried to explore the social freedom of women from rural area in relation to some demographic variables. Main objectives of this study are (i) To study the social freedom of women in relation to educational status; (ii) To study the social freedom of women in relation to occupational status; and (iii) To study the social freedom of women in relation to marital status. Descriptive survey method is applied in this study and sample women are collected from Goreswar area of Baksa district, Assam. For collection of necessary data, 'Women Social Freedom Scale' developed and standardised by Dr. L. I. Bhutan is applied and collected data are analysed with the help of simple percentage. Major findings of this study are: (i) Educational status of most of the respondents are illiterate and up to primary education level category; (ii) Social freedom thinking of highly educated women is high as compared to other categories of women; (iii) Most of the illiterate women's social freedom thinking is extremely low; (iv) Social freedom of women engaged in Govt. job and industry are high as compared to the women of other category regarding occupational status.

**Key Terms:** Social freedom, Women, Educational status, Occupational status, Marital status.

## A Study On Women Empowerment In India With Special Reference To Assam

Dr. Dilip Ch. Das

Associate Professor

Department of Commerce Goreswar College,

Goreswar (BTAD) Baksa,

Assam Pin- 781366

### ABSTRACT

This paper attempts to analyze the status of Women. Today the empowerment of women has become one of the most important concerns of 21st century. But practically women empowerment is still an illusion of reality. We observe in our day to day life how women become victimized by various social evils. Women Empowerment is the vital instrument to expand women's ability to have resources and to make strategic life choices. Empowerment of women is essentially the process of upliftment of economic, social and political status of women, the traditionally underprivileged ones, in the society. It is the process of guarding them against all forms of violence. The study is based on purely from secondary sources. The study reveals that women of India are relatively disempowered and they enjoy somewhat lower status than that of men in spite of many efforts undertaken by Government. It is found that acceptance of unequal gender norms by women are still prevailing in the society. The study concludes by an observation that access to Education, Employment and Change in Social Structure are only the enabling factors to Women Empowerment. Women empowerment is a debatable subject. At earlier time they were getting equal status with men. But they had faced some difficulties during post-Vedic and epic ages. Many a time they were treated as slave. From early twenty century their statuses have been changed slowly and gradually. In this regard, we may mentioned the name of the British people. After then, independence of India, the constitutional makers and national leaders strongly demand equal social position of women with men. Today we have seen the women occupied the respectable positions in all walks of the fields. Yet, they have not absolutely freed from discrimination and harassment of the society. A few numbers of women have been able to establish their potentialities. Therefore, each and every should be careful to promote the women statuses.

## The Significance of the Buddhist Pāli Canon in the Modern-day

Nijara Medhi

### **Abstract:-**

*This paper is a result of studying the Pāli Canon of Buddhist studies and its significance in modern times. Buddhist Pāli Canon refers to the set of scriptures in which the Buddha's tradition. The word Tipitaka designates the three major divisions of the Buddhist Canon. The Pāli Canon is not a single volume. Even if human civilization has made immense improvement over the last several millennia up to the so-called globalization age of the present, the human race is by no means free or removed from the problems of suffering, infliction of harm, distress, and war. People look to the ethical systems of various cults and religions to help resolve these problems. But these cults and religions in general only progress with regulations or dictates for them to follow with their faith thereby releasing them from their personal and interpersonal problems only to subject them to punishment and reward by forces believed to be supernatural. In this regard, Buddhism according to the word of the Buddha in the Pāli Canon is unique in that it teaches an ethical system of self-development for human beings to be released from all sorts of problems and become truly independent by not relying upon any forces from without. The Pāli Canon is usually recognized as the oldest, most original, most complete, and most accurate record of the Buddha's teachings still available today. The Pāli Canon explains how to be happy and free from suffering and how to get Nibbāna. Buddha taught the Eightfold Path as a way of Nibbāna. Moreover, Pāli Canon tried to establish freedom, harmony, loving-kindness, equality, and fraternity in this world.*

**Keywords-** Pāli Canon, Nibbāna, Eight-Fold-Path, Loving-kindness, Harmony,

### **Introduction :**

Buddhist Pāli Canon refers to the set of scriptures in which the Buddha's teachings. The term *Tipitaka* denotes the three major divisions of the Buddhist Canon. The Pāli Canon is not a single-volume scripture, but an enormous set of scriptures containing as many as 84,000 textual units. The Pāli Canon is unique in that it teaches an ethical system of self-development for human beings to be released from all sorts of problems and become truly independent by not relying upon any forces from without. The Pāli Canon teaching of the Buddha on how to reach enlightenment as well as teachings to help guide Buddhists in their everyday life.

The Pāli Canon refers to the set of scriptures in which the Buddha's teachings, the Dhamma 'Doctrine', and Vinaya 'Discipline' are enshrined. The Pāli term *Tipitaka* 'three baskets' denote the three major divisions of the Canon. The philosophy of Buddhism is mainly found in these *Pitakas*. This research, the paper offers an overview of the Pāli Canon and it is important in contemporary times.

Buddhism teaches a way of life that ultimately leads to the goal of final deliverance from suffering. The voluminous scripture where the tenets of Buddhism can be found is

called the *Pāli* Canon. A true Buddhist has to practice it properly and ensure the right practice. The *Pāli* term for the *Pāli* Canon, however, is *Tipitaka*, from 'three' + *Pitaka* 'text, scripture, or basket', which designates its three major divisions of teachings such as *Vinayapitaka*, *Suttantapitaka*, and the *Abhidhamma Pitaka*.

*Vinaya Pitaka* is the collection of monastic rules laid down by the Buddha for monks and nuns. The *Suttantapitaka* is the collection of discourses or specific teachings that were adaptively expounded by the Buddha to suit the individual, place, and event or situation in question, together with supplemental material. The *Abhidhamma Pitaka* is a collection of teachings that are purely substantive without reference to any individuals or events and any supplemental material. The *Pāli* Canon is not a single-volume scripture, but an enormous set of scriptures containing as many as 84,000 textual units.

The *Pāli* Canon is therefore important as the vehicle through which the Triple Gem becomes known. Preserving the *Pāli* Canon is an effect of maintaining the Triple Gem, which is also maintaining Buddhism itself. Buddhism can be seen as the resultant virtue, progress or growth, or the development of the Threefold Training in one's life. The sort of Buddhism that constitutes one's life also has to rely on the *Pāli* Canon, for Buddhism in this sense means the ability to get rid of greed, hatred, and delusion and to train in morality, concentration and wisdom. In organizing the teachings into the *Tipitaka*, tradition has established a relationship between each of the three major divisions of the *Pāli* Canon with each component of the Threefold Training as follows:

The *Vinaya Pitaka* as the collection of monastic rules for monks, including both the 227 training rules of the *Pātimokha* and those outside of the *Pātimokha*, constitutes the discipline or *Sila* 'morality- the training and development of bodily and verbal behavior.'

The *Suttantapitaka* encompasses all of the Threefold Training, but it has been pointed out that its main focus is on the second component of the Threefold Training, i.e. *saṃādhi* concentration, or emotional development.

Finally, the focus of the *Abhidhammapitaka* is on *pannā* 'wisdom'. In contemporary parlance, the contents of this *Pitaka* are purely scholarly. It brings up for scrutiny phenomena that are subtle and profound. It thus belongs to the domain of wisdom, requiring profound penetrative knowledge.

If we observe the principles of morality, concentration, and wisdom as expounded in the *Pāli* Canon. Our lives will become like the teaching itself thereby preserving Buddhism with our own lives. As long as we live, so will Buddhism survive? In short, we Buddhists rely directly upon the *Pāli* Canon by applying the teachings therein so that our practice will bear fruit in real life. In this regard, Buddhism according to the word of the Buddha in the *Pāli* Canon is unique in that it teaches an ethical system of self-development for human beings to be released from all sorts of problems, and become truly independent by not relying upon any forces from without. In this regard, Buddhism is a system of teachings quite specialized in ridding life's ultimate problem of mental suffering. With one's wisdom, one can eventually attain the objective truth of nature, and completely eradicate the germ of mental distress, the mind being thus released to end with from suffering, becoming relieved and radiant.

#### **The Classification of scriptures in the *Pāli* Canon**

We can now turn to the structure and organization of the *Pāli* Canon. These are as follows:

**The *Vinaya Pitaka*:** It is a compilation of the word of the Buddha in the domain of the

Discipline, or the rules lay down by the Buddha concerning the conduct, ways of living, customs, and administration of monastic affairs for monks and nuns. The *Vinaya Pitaka* is divided into five scriptures (*A.*, *Pā.*, *Ma.*, *Cū.*, *Pa.*) and published in eight volumes: *Mahāvibhaṅga part 1.*, *Mahāvibhaṅga part 2.*, *Bhikkhunivibhaṅga*, *Mahāvagga part 1.*, *Mahāvagga part 2.*, *Cullavagga part 1.*, *Cullavagga part 2.*, *Parivāra*.

**The Suttantapitak:** The *Suttantapitaka* is a compilation of the word of the Buddha in the domain of Discipline. The *Sutta Pitaka* is divided into five scriptures (*Di.*, *Ma.*, *Sam.*, *Am.*, *Khu*) and published in eight volumes such as *Dighanikāya* (3 volumes: *silakkhandavagga*, *mahāvagga*, *pātikavagga*) *Majjhimanikāya* (3 volumes: *mulapannāsaka*, *majjhimapannāsaka*, *uparipannāsaka*), *Samyuttanikāya* (5 volumes: *sagāthavagga*, *nidānavagga*, *khandhavārvavagga*, *salāyatanaavagga*, *mahāvāragga*), *Anguttaranikāya* (5 volumes: *Eka-*, *duka-*, and *tikanipāta*, *catukkanipāta*, *pancake*, *Satta ka*, *dasaka*), *Khuddakanikāya* (9 volumes: Five minor scriptures: (*khuddakapātha*, *Dhammapada*, *Udāna*, *Itivuttaka*, *Suttanipata*) Four scriptures composed: (*Vimanavatthu*, *Petavatthu*, *Theragāthā*, *Therigāthā*), *Jātaka*: part-1, *Jātaka*: part-2, *Mahāniddesa*, *Culaniddesa*, *Patisambidāmagga*, *Apadāna* part-1, *Apadāna* part-2.)

**The Abhidhamma Pitaka:** The *Abhidhammapitaka* is divided into seven treatises: *Dhammasaṅgani*, *Vibhaṅga*, *Dhātukathā*, *Puggalapaññatti*, *Kathāvatthu*, *Yamaka*, *Paṭṭhāna*.

The *Pāli* Canon is the source of the Buddha's teachings. Any teachings, explanations, scriptures, books, or textbooks, whether orally provided or compiled by teachers and scholars which, are regarded, as Buddhist must of necessity be derived from and in compliance with the principal tenets in the *Pāli* Canon, which are the basis or source. According to the assessors, the *Pāli* Canon encompasses 84,000 units of teaching, of which 21,000 units belong to the *Vinayapitaka*, 21,000 units to the *Suttantapitaka*, and the remaining 42,000 units to the *Abhidhamma Pitaka*. The study of the *Pāli* Canon is a task of crucial importance for Buddhists. It is regarded as the maintenance or survival of Buddhism. In other words, as long as the *Pāli* Canon is studied as the guiding principle for practice, Buddhism will survive. Apart from the importance it directly bears on Buddhism, the *Pāli* Canon is valuable in many respects, particularly the following.

**Conclusion:** The *Pāli* Canon is an enormous record of cults, creeds, religions, philosophies, customs, traditions, cultures, affairs, events, and localities, such as the various city-states, in the past. The *Pāli* Canon is the source of concepts related to various fields of study, as the teachings in the doctrine and discipline are related to, or inclusive of, many different disciplines such as psychology, law, governance, and economics, to name a few. It is the source of the *Pāli* words used in the *Thai* language. As the *Pāli* language is an important basis for the *Thai* language, the studies of the *Pāli* Canon are especially helpful to the study of *Thai*. In sum, studies and researches in the *Pāli* Canon are not only of tremendous value to the study of Buddhism but also of great benefit to a broad spectrum of disciplines including the *Thai* language, geography, history, sociology, anthropology, archaeology, political science, economics, law, education, religion, philosophy, psychology, etc.

Human progress has made enormous advancement over the last several millennia up to the so-called globalization age of the contemporary; the human race is by no means liberated or removed from the tribulations of suffering, infliction of harm, anguish, and

hostilities. People look to the ethical systems of different religious groups and faith to help resolve these tribulations. But these religious groups and faith in general only come up with rules or dictate for them to follow within their faith, thereby releasing them from their personal and interpersonal problems only to subject them to punishment and reward by forces believed to be supernatural. In this regard, Buddhism according to the word of the Buddha in the *Pāli Canon* is unique in that it teaches an ethical system of self-development for human beings to be released from all sorts of problems, and become truly independent by not relying upon any forces from without.

## **Guidelines for the Authors**

1. Dego Rangrang Research Journal is a bilingual (i.e., Assamese and English) Biannual Research Journal. After completion of its glorious seven years this Journal has been indexed in the UGC-CARE List (Sl. No. 67 in Social Sciences Category). The Journal publishes Research articles, Research papers, Review papers containing original Research works\* of good standard.
2. All the Research papers and articles should be submitted by e-mail in soft copy along with PDF file tested by Plagiarism checker. Soft copy should be in MS Word or Page Maker. In English all the matters should be typed in Times New Roman Font (Size 11 Point). In Assamese the matters should be typed in Gontanjali light Font (Size 13 Point) of Standard Software.
3. Maximum pages of a paper should be 10 pages in A4 size (for such excess pages will be charged extra amount).
4. Papers must be included Abstract, Keywords, Introduction, Methods, Conclusion, Acknowledgement and References/Sources. Headings and sub-headings should be capitalized and bold faced.

**Abstract:** It should not exceed 250/300 words in a single paragraph and does not require sources, sub-headings and should be a brief summary of the work carried out including the objectives of the study, the techniques used and what was accomplished in a concise manner.

**Keywords:** It should contain up to 4-10 key terms related to the work separated by commas.

**Introduction:** It should represent the background significance, brief survey of the previous works, purpose, scope and novelty of the research work and should not have subheadings.

**Methods:** Sufficient information in detail regarding the materials and the methods used to carry out the research works (analytical, statistical and experimental procedures) should be mentioned to enable the others to repeat the author's work. Source of chemicals and drugs, animals used, ethical committee permission should be mentioned.

**Results and Discussion:** It should contain summary of the research, results, interpretation, speculations and assessment of future research or prospects.

**Conclusion:** It should include outcome of the work, important findings and researcher's view(s).

**Acknowledgements (if any):** It should have the brief information regarding any research grant support or the assistance of colleagues or institutions.

**References/Sources:** They should be arranged at the end of the manuscript in order of their appearance in the text. References should follow the MLA Citation Style.

### **5. Peer review process of the Research Papers:**

After receiving the Research Papers, the Papers will be sent to peer review team for approval. Without approval of the team the papers will not be published.

**Manuscripts are scrutinized through a special procedure:**

- (i) At first all papers sent through proper channel will come under the scanner of qualitative value in 3 categories in broadly. A category means Excellent and the Paper may be accepted for publication after minor corrections. B category means that the Paper need reviewing and C category means that the Paper needs major correction/rewriting or it is totally rejected if the author fail to submit the corrected or rewritten manuscript within the given time frame allowed by the Editorial Board of Dego Rangrang Research Journal.
- (ii) Then each paper is subjected to anti-plagiarism check. If the paper is found to be plagiarized, it is rejected and immediate communication is made to the author to revise or resubmit or make other decisions. If it is plagiarism free, the editor deletes the author's details, codes it and sends the coded manuscript to two reviewers of the particular field one after another simultaneously. Once the reviewers have gone through the Paper, they send back the manuscript to the editor with comments and the author is given a chance to make corrections as per the reviewers' directions.

5. There will be two Internal and two External reviewers for scrutinizing of each research paper. If the first reviewer has no objection concerning the Methodology, Content etc. of the Paper then it is sent to the second External reviewer. If the first reviewer has some queries regarding the Paper or some objections on its content, then it is sent to the second reviewer for review and necessary corrections/ rewriting as the case may be.
- The process is repeated until the reviewers and the editors are convinced that the manuscript is ready for publication.
6. The Editorial Board reserves the right to take the final decision of accepting or rejecting a Paper and make changes in the articles.
7. Authors will be solely responsible for factual accuracy of their contribution.\*\*
8. The manuscript will not be returned in any case whether accepted or rejected.
9. Authors and co-authors may or may not be members of Dogra Ranganga Research Society but the authors should purchase at least ten copies of the Journal (In which Volume their articles are printed) for broad circulation.
10. The date for releasing the Journal are firstly on 2<sup>nd</sup> January i.e., "Saratostar Din" on the Birth Anniversary of Professor Upendra Bahadur Haksar and secondly as additional issue on 2<sup>nd</sup> July.
11. The Research Articles must be accompanied by a copy-right certificate duly signed by the contributor(s) in the following format ...

**12. Publication Ethics:**

When an author submits a manuscript for publication consideration, he or she agrees to abide by publication requirements of International Academic & Research Consortium.

- Agree that his or her manuscript presents work that is original, not plagiarized; that he or she has not submitted the manuscript under review for publication elsewhere, and that he or she will not submit the manuscript under review to another publication during the review period.
- Take full responsibility for the work he or she submits to and publishes with the International Academic & Research Consortium.

**Manuscript Submission:**

- Authors should submit their manuscript by email to [dogranganga@rediffmail.com](mailto:dogranganga@rediffmail.com)
- Manuscripts should be sent at least 6 months prior to the particular issue of the Journal for the convenience of smooth processing. However the society reserves the right to consider limited manuscript on the basis of *call for service*.

**\*\*\* Annexure-I: Self Declaration Form:**

Certified that the manuscript / paper titled \_\_\_\_\_ is original, unpublished and is not under consideration for publication elsewhere. Further, it will not be submitted for publication elsewhere until a decision is conveyed regarding its unsuitability for publication in 'Dogra Ranganga Research Journal'. If accepted for publication, I/we agree that it will not be published elsewhere in whole or in part without prior permission of the Editorial Board of Dogra Ranganga Research Journal.

I/we, the undersigned author (s), hereby transfer/assign all copyrights of my/our papers titled \_\_\_\_\_ to Dogra Ranganga Research Journal.

Date: \_\_\_\_\_

## Abstract

After independence, the Government of India started taking steps to encourage the spread of banking in India. In order to serve the economy in general and the rural sector in particular, the All India Rural Credit Survey Committee recommended the creation of a state-partnered and state-sponsored bank taking over the Imperial Bank of India and integrating with it, the former state-owned and state-associate banks. Accordingly, State Bank of India (SBI) was constituted in 1955. Subsequently in 1959, the State Bank of India (subsidiary bank) Act was passed, enabling the SBI to take over eight former state-associate banks as its subsidiaries. To better align the banking system to the needs of planning and economic policy, it was considered necessary to have social control over banks. In 1969, 14 of the major private sector banks were nationalized. This was an important milestone in the history of Indian banking. This was followed by the nationalization of another six private banks in 1980. With the nationalization of these banks, the major segment of the banking sector came under the control of the Government. The nationalization of banks imparted major impetus to branch expansion in un-banked rural and semi-urban areas, which in turn resulted in huge deposit mobilization, thereby giving boost to the overall savings rate of the economy. It also resulted in scaling up of lending to agriculture and its allied sectors. However, this arrangement also saw some weaknesses like reduced bank profitability, weak capital bases, and banks getting burdened with large non-performing assets. To create a strong and competitive banking system, a number of reform measures were initiated in early 1990s. The thrust of the reforms was on increasing operational efficiency, strengthening supervision over banks, creating competitive conditions and developing technological and institutional infrastructure. These measures led to the improvement in the financial health, soundness and efficiency of the banking system.

## Introduction

### Background to the Study

Banks have played a critical role in the economic development of some developed countries such as Japan and Germany and most of the emerging economies including India. Banks today are important not

# Women Empowerment through Education in India - A Study

Dr. Dilip Ch. Das

Associate Professor, Goreswar College, Goreswar, Baksa, Assam, Pin- 781366

## Abstract

Women education in India has also been a major preoccupation of both the government and civil society as educated women can play a very important role in the development of the country. Education is milestone of women empowerment because it enables them to respond to the challenges, to confront their traditional role and change their life. So that we can't neglect the importance of education in reference to women empowerment. India is poised to becoming superpower, a developed country by 2020. The growth of women's education in rural areas is very slow. This obviously means that still large womenfolk of our country are illiterate, the weak, backward and exploited.<sup>1</sup> Education of women in the education of women is the most powerful tool of change of position in society. Education also brings a reduction in inequalities and functions as a means of improving their status within the family.

**Keywords:** Education, Female Literacy Rate, Women Empowerment, Importance of Education, Powerful Tool

**Introduction:** "If you educate a man you educate an individual, however, if you educate a woman you educate a whole family. Women empowered means mother India empowered". - PT. JAWAHARLAL NEHRU

Women constitute almost half of the population in the world. But the hegemonic masculine ideology made them suffer a lot as they were denied equal opportunities in different parts of the world. The rise of feminist ideas has, however, led to the tremendous improvement of women's condition throughout the world in recent times. Access to education has been one of the most pressing demands of these women's rights movements. Women education in India has also been a major preoccupation of both the government and civil society as educated women can play a very important role in the development of the country. India is poised to emerge as one of the most developed nations by 2020, more literate, knowledgeable and economically at the forefront. No doubt, women will play a vital role in contributing to the country's development. Women power is crucial to the economic growth of any country. In India this is yet to meet the requirements despite reforms. Little has been achieved in the area of women empowerment, but for this to happen, this sector must experience a chain of reforms. Though India could well become one of the largest economies in the world, it is being hindered due to a lack of women's participation.

## Objective of Study:

- To study the Women education in India
- To study the Women empowerment through education
- To study the Women's education Prospects and challenges
